Description

The PE-W22TF005-12 is part of Pasternack's family of flexible, twistable waveguides which operates in the 33 to 50 GHz, Q Band range. The flexible waveguide section is made of a helically wound silver coated brass strip. It can be twisted and/or bent in both the E and H planes without impairing VSWR or attenuation. The waveguide section is covered by a neoprene jacket which protects the waveguide, provides mechanical support and allows the waveguide to be pressurized.
