

Connectivity has a profound and dramatic impact on the lives of people throughout the world. Because of advancements in technology, **our** lives are more convenient, more secure, more enjoyable and richer than ever. The speed of data enables communication in the **most** remote areas so people can reach all corners of the globe, allows for **important** defense and security, and facilitates space exploration. But technology doesn't just happen. It starts in the mind with ideas, making **connections** never considered in ways that nobody dreamed possible. Seeing the future in ways previously unimagined **is** the act of innovation and it begins with people—the inventors, the dreamers, the pioneers and the engineers—enriching the lives of billions. At Radiall, we have one single, solitary mission; Empower the people that enrich our lives. Enable their innovation by providing reliability and durability. Give them useful information and provide them with valuable guidance when determining the best course for success. We don't invent the future, we enable it. We inspire innovation, we embrace challenges, we challenge the conventional and we collaborate **with** you to succeed. At Radiall, we're proud to say – Our most important connection is with **you**.

# Company Profile

## *Our Most Important Connection is with You™*

Radiall is a global leader in the design, development and manufacturing of leading edge interconnect solutions. Dedicated to understanding its customers' needs since 1952, Radiall has earned the reputation of being "the best of the best" in engineering ingenuity by providing a constant flow of creative system solutions serving the defense, telecommunications, aerospace, instrumentation, automotive, industrial, medical and broadcast markets.

## *Best Value-added Services*

**Collaboration:** We work closely with your engineers to understand your business, your technical needs, and your budgetary issues.

**Wide Product Range:** We manage our product lines thru the entire lifecycle in order to offer you a wide selection of standard products at an affordable cost.

**Custom Products:** We can tailor products to specific equipment and application needs.

**Global Presence:** We're everywhere you need us, with worldwide sales, engineering support, R&D in North America, Europe, and Asia, and manufacturing facilities strategically located in the United States, Mexico, France, India, and China.

**Responsive Support and Service:** From the design stage, planning to post-installation support, we're with you at every step, whether you need sales support or engineering expertise.

**On-time Delivery:** We support your logistical needs so you get the products when and where you need them.

**Warranty:** We proudly stand behind our products.

## *Certifications and Environmental*

Radiall is ISO 9001: 2008 certified and dedicated to continuous improvement programs that have resulted in also being AS9100, TS16949 and ISO 14001 certified. In addition, Radiall is committed to investing in its people, future technologies and the environment, such as being RoHS (Restriction of Hazardous Substances) and REACH (Registration, Evaluation, Authorization and Restriction of Chemical substances) compliant.

## *The Best End-to-End Interconnect Solutions*

We offer an extensive range of solutions that supports the most demanding signal transmission applications. 4G wireless infrastructure, active array radars, IED's detection, electrical wiring in aircrafts, soldier tactical radios, in-vehicle communications networks, and magnetic resonance imaging systems are just a few of the complex applications that we support.

- RF coaxial connectors
- Fiber optic connectors and transceivers
- Coaxial and fiber optic cable assemblies and harnesses
- High frequency microwave components
- Coaxial switches, including the smallest and most reliable SPDT relay
- Multipin rectangular connectors
- Rack and panel connectors
- Antennas for tactical networks, aerospace and instrumentation

Technical information and sales contacts are available at:

# A Global Range to Meet Your Needs

## RF Coaxial Connectors

Radiall proudly offers the widest range of RF Coaxial Connectors in the Industry with over 12,000 part numbers and 72 product series including AEP® Mil QPL connectors. These precision-made components are a significant part of our heritage and essential to who we are.

## Microwave Components

Radiall has a wide range of coaxial devices, including terminations, attenuators, and couplers using standard interfaces from low to high power. Our state of the art techniques enable us to produce microwave components for use in commercial, military, and space applications.

## Multipin Connectors

Radiall has an unmatched range of rack and panel connectors and the most innovative modular and tool-less connectors used in harnesses and equipment connections. Our modern designs combine light weight, high performance levels and user friendly features to simplify even the most complex connections.

## Space Qualified

Industry leaders across the globe recognize the Radiall brand for quality, reliability, and performance. Our Space Qualified passive product offering includes a wide range of coaxial connectors, cable assemblies, microwave components, and switches with a frequency range up to Ka band.

## Harnesses

The combination of design and manufacturing of RF and microwave cables as well as multipin connectors (EPX, ARINC 404 and 600) allows Radiall to be a specialist of harnesses for onboard or land equipment or communications systems. All types of contacts can be used and mixed such as signal, power, RF, quadrx, fiber optic...

## RF & Microwave Switches

All Radiall switches provide exceptional reliability and performance. A unique modular and patented design of the actuator and transmission link enables Radiall to guarantee operation up to 10 million cycles with excellent repeatability, while reducing delivery times.

## Antennas

Radiall provides highly reliable antenna solutions for industrial and military applications. Our solutions include Line-Of-Sight tactical communications, vehicular mount, GPS, telemetry, and mesh networks. For optimum performance requirements, Radiall offers custom antenna solutions and support.

## RF Cable Assemblies

Radiall has an extensive range of cable assemblies with outstanding electrical performance, low loss, and high frequency. Our range includes flexible, semi rigid and handformable cable assemblies. Our TestPro™ range meets the stringent requirements needed for test and lab applications.

## D-Lightsys®

Active Optical Solutions Optimized by D-Lightsys® for harsh environments. From optical transceivers to the world's smallest parallel optics, D-Lightsys® technologies support the most challenging applications, including harsh environments and avionics applications.

## Fiber Optics

Radiall designs and supports high performance end-to-end Optical Interconnect solutions. Our offer includes standard interfaces, termini, connectors, harnesses and custom design optical links and subsystems. The flexibility and high quality of our product range supports harsh environments and demanding applications.

## Coaxial Switches Activity Information

### EXPERIENCE

With over 60 years of experience and continuous efforts in R&D, Radiall has become Europe's number one source for coaxial connectors. Radiall's position as a market leader has enabled the company to excel in the passive microwave component field for more than 50 years. Radiall's expertise in design, development and manufacturing of passive microwave components is widely acknowledged in today's industry.

### A WIDE RANGE OF SOLUTIONS

Specialized in passive microwave components, Radiall's design team and engineering staff manufactures a wide range of standard coaxial devices including: terminations, attenuators, couplers, coaxial detectors, coaxial and waveguide switches covering a frequency range from DC to 50 GHz.

### RESEARCH AND DEVELOPMENT

Due to the increased complexity of microwave systems more high performance components are required.

To meet these requirements, Radiall's R&D department is constantly working on development of new products and improvement on existing products.

Equipped with microwave and mechanical CAD and the latest generation of microwave test equipment up to 60 GHz, Radiall uses state-of-the-art technology to optimize products and quickly respond to specific customer requests.

### CAPACITIES AND FACILITIES

Radiall's global presence and worldwide facilities offer expertise in the following: marketing, research and development, industrialization, manufacturing and quality control. This strong heritage enables Radiall to produce a range of high performance and low cost devices for industrial applications, and high reliability components for severe requirements in military and space markets.

Head office - Aubervilliers France

## Coaxial Switches Activity Information

### PRODUCTION

Electrical performance of microwave products is determined by machining quality of individual piece parts and associated plating.

Equipped with computer-controlled machinery, and an in-house plating department, Radiall is able to manufacture high quality piece parts that are compatible with existing components.

Due to the thick and thin film etching equipment, Radiall's production department guarantees the quality of the resistive cells used in most terminated switching products. A prototype workshop allows Radiall to quickly respond to special customer request.

All the phases of manufacturing and test are strictly inspected by our quality department, so as to warrant the constancy of our products and to achieve general and specific requirements.

Radiall's quality department inspects products through all phases of manufacturing and testing, to ensure consistency to all products for customer satisfaction.

### QUALITY AND RELIABILITY AND PATENTS

Radiall's main focus for passive microwave components are quality and reliability. ISO 9001 V2008 label is the best evidence of quality assurance interfaces at every stage of a product from designing to manufacturing.

All new products are subject to a rigid qualification program before massive production begins. Additionally, product quality is reviewed and tested periodically.

### NATO CODE

Radiall is a qualified microwave components manufacturer under military label (manufacturer code F0503 and F6507), and offers quality assurance developed in accordance with N.A.T.O. standards.

TECHNICAL INFORMATION

## Coaxial Switches Activity Information

### A TESTING LABORATORY

As an illustration of Radiall's commitment to quality and reliability, Radiall has an in-house test laboratory qualified by CECC which permits Radiall to complete the majority of tests required by customers.

### PARTIAL LIST OF TEST MEANS

#### Electrical

Breakdown voltage	12 KVolts
Insulation resistance	40.103 MOhms
Contact resistance	1μ0hms

#### Environmental

Vibrations: Sine random	0 - 120 g; 5 to 4000 Hz
Shocks	30 to 1000g
Shakes	25 to 40g 6 ms
Thermal vacuum	10-5 TORR; -45 to +100°C
Thermal shock	-70°C +200°C / transfert 20s
Storage temperature	-70°C to +200°C
Humidity	20 to 98 % HR
Salt Spray	-35°C to +55°C
Hermeticity	Helium 10-5 to 10-8 atm cm3 /s

#### Microwave

V.S.W.R. insertion loss Isolation	Vector Network Analyzer From 0.04 up to 60 GHz TDR 150ps
RF Leakage/EMC	Reverberation chamber method 0.5 to 20 GHz / Noise 100 dB
Power Handling	400 W CW at 936 MHz 400 W CW at 17.8 GHz 20 W CW 8 up to 18 GHz 100 W CW at 420 MHz

## Coaxial Switches Activity Information

### CAPABILITIES

Radiall offers a wide variety of coaxial switches to answer customer needs. This catalog is intended to be used as a guide in selecting the right type of switch for a given application. It is important to note that Radiall is not limited to catalog products and has the flexibility to design a specific product on a tight schedule at a reasonable cost. Radiall is always available to discuss specific customer requests.

### RELIABILITY

Radiall's coaxial switches offer exceptional reliability and performance. A unique patented design of the actuator and transmission link enables Radiall to guarantee operation up to 10 million cycle for Terminated SPnT, others series as well, with excellent repeatability.

### LIST OF APPLICABLE DOCUMENTS

AIR 7304	NFC 93563	MIL C 39012
DIN 47295	NFC 93564	MIL E 5400
NFC 93561	NFC 96317	MIL STD 202
NFC 93562	MIL DTL 3928	154 IEC

List of related covering the general mechanical and environmental tests applicable to the devices described in this catalog.

## Coaxial Switches Activity Information

### GENERAL SPECIFICATIONS DESIGNED TO MEET MIL DTL 3928 AND MIL STD 202

#### Environmental Characteristics

Vibrations Method 204	10 - 2000 Hz 10g	Operating
Shocks Method 213	50g, 1/2 sine	Non-operating

These requirements are guaranteed according to MIL standard, see applicable product section to get more accurate and detailed information.

#### Mechanical Characteristics, Material and Finished

RF body	Aluminium, Gold plated Aluminium, Nickel plated Aluminium with Cr3 passivation
Contacts	Beryllium Copper, Gold plated
Insulator	PTFE, ULTEM 1000
Connectors	Stainless steel, passivated brass, Nickel plated
Construction	Splash proof
Cover	Aluminium, blue anodized

All materials and finishes are in accordance with applicable MIL and NF specifications. All connectors are in accordance with applicable MIL, DIN, NF and CEI specifications. All dimensions in this catalog are given in millimeters. The non specified dimensions are given within +/- 0.5 mm.

#### Manufacturing and Quality Assurance

Radiall's RF switches product line is made of approximately 20 series of switches, with each series divided into a large number of configurations. Part numbers consist of 9 digits, each digit designating a portion of the parts actual identity (such as series, frequency, actuator voltage, etc...).

For each digit, 2 to 10 options are available. A complete part number represents a unique configuration.

Overall, there are more than 80,000 different configurations available with very few subassemblies due to the modularity of the RAMSES switching line (less than 300 different subassemblies).

A Push-Pull manufacturing process has been implemented to reduce both lead time and inventory. Based upon marketing forecast and monthly updates, various subassemblies are manufactured.

When an order is received, an automated MRP system selects the appropriate subassemblies from stock to manufacture the requested products within a short time frame (a few days to a few weeks) depending on the complexity of the product.

Radiall has adopted the process management philosophy of "Lean Manufacturing".

This process enables the best possible price and lead times on coaxial products by eliminating unnecessary stages of the administrative processes.

The lean manufacturing concept, was first applied to the RAMSES SPDT and SP6T non terminated coaxial products and is now being expended over all coaxial switches.

## Manufacturing and Quality Assurance Flow

Quality

TECHNICAL INFORMATION

## RAMSES Concept

An innovative system has been designed for constructing electromechanical coaxial RF switches with increased long-term reliability. Radiall's Modular System for Electromechanical Switches (RAMSES) is a patented concept that enables microwave coaxial switches to be produced with a typical operating life of 10 million cycles while suffering no decrease in contact resistance reliability over time. In addition, the unique internal construction makes the switches cost-competitive with traditional switches.

Figure 1: conventional switch contacts after one million cycles

a) RF line open

(b) RF line closed

### Friction Effects

The unique design of RAMSES is based on the reduction of friction, which minimizes particle deposits that can interfere with the transmission of lower frequency signals (up to 3 GHz).

This particle elimination effect is particularly important for telecommunication applications that are currently in the 900 MHz and 2 GHz range. In addition, the design involves fewer components compared to other microwave switches, making it quick and easy to assemble.

These savings directly relate to lower cost for improved performance. Many of the existing coaxial electromechanical switches also are able to function mechanically for 10 million operations.

However, the reliability and quality of the electrical contact can decrease over the life cycle.

In general, these traditional switches operate by moving a rectangular switching blade section inside a rectangular cavity. The blades are linked with pushers constructed of dielectric material that travel inside an access hole between the RF cavity and switch actuator. The pushers are directed by dielectric material guides. These dielectric parts rub on the blades and inside the access hole and generate isolating particles in the RF cavity that pollute the electrical contacts and ultimately cause running defects.

**Figure 1** shows the build-up of minute dielectric particles on a set of conventional switch contacts after one million cycles. These defects are not particularly noticeable at very high frequencies since the contact is established by a capacitive effect. However the insertion loss of the contacts increases considerably at lower frequencies (3 GHz below).

## RAMSES Concept

### A New Actuator Configuration

To eliminate this problem of increased insertion loss in the contacts, RAMSES devices incorporate a patented system. This system, compresses two parallel blades suspended from a bearer, which enables the guiding and positioning of the commutation blades to be accomplished entirely outside the RF cavity. These blades impose a rectilinear motion on the switching pusher, suppressing both friction and the production of particles inside the RF cavity. The unique system is extremely small and can be used in all of RAMSES series switches.

Figure 2: cutaway view

Figure 3: a RAMSES set of contacts

a) RF line open

(b) RF line closed

**Figure 2** shows a cutaway view of a RAMSES coaxial switch displaying the actuator mechanism. A second improvement involves a new rectilinear actuator design using high energy magnets and a switching performance in relation to its size.

The system is used in the production of both failsafe and latching actuators, depending on how it is applied in the switch. These actuators are either 500g locking forces or 300 to 800g current forces for a power consumption of 100mA at 28V.

The new actuator has the added advantage of very low magnetic leakage, allowing actuators to be used in close proximity to one another without performance degradation. The use of a dry, solid lubricant and the control of friction areas provide an actuator life expectancy of over 50 million operations without defect when temperature range exceeds -55° to +85°C.

### Switch Performances

RAMSES series switches have successfully survived tests of 10 million switching temperature cycles from -55° to +85°C while demonstrating good contact resistance stability. Visual inspection of these switches after testing has indicated that the RF lines were free of much of the contamination found during similar tests on traditional switches. A comparison of the actual measured contact resistance obtained from monitoring both conventional and RAMSES switches using several parts that have already been actuated one million cycles is shown in figure 4. Although the conventional switch may not be considered failure, its contact resistance has become unstable, thus degrading its reliability.

Figure 4: A comparison of (a) conventional and

CYCLES

(b) RAMSES switch design contact resistance during one million cycles

CYCLES

## RF Arrangement

### Coaxial SPDT Switch

(Single Pole Double Throw)

Single pole Double Throw Switch

A switch with one input port and two selectable output ports

### Coaxial SPDT Terminated Switch

(Single Pole Double Throw terminated)

Single Pole Double Throw, Terminated switch

Same as SPDT, but the unused output port is automatically terminated by a 50 Ohm resistive load.

### Coaxial DP3T Switch

(Double Pole Three Throw)

Double Pole Three Throw switch

A switch with two input ports and three output ports. Each input (J2 - J4) can be switched between two adjacent outputs with one output being common to both inputs

### Coaxial DPDT Switch

(Double Pole Double Throw)

Double Pole Double Throw Switch

A four port switch with two independent paths that operate simultaneously in one of two selected positions. In a DPDT / Transfer switch, the two transmission paths are provided as shown above

### Coaxial Multiposition Switch

(Single Pole n Throw)

Single Pole n Throw Switch (n<13)

A switch with one input port and more than two output ports. The multiposition switch allows direct access to any individual output port by energizing the respective actuator. Radiall SPnT switches provide up to 12 Output ports

### Coaxial Multiposition Terminated Switch

(Single Pole n Throw Terminated)

Single Pole n Throw Terminated Switch (n<13)

Same as SPnT, but each unused output port is automatically terminated in an internal 50 Ohm resistive load.

## Glossary

**Actuator Voltage:** All RAMSES series relays are either 12 or 28 Vdc nominal voltage over the entire temperature range. The switches can be operated with a voltage between -15 % and +10 % of the nominal value. Other voltage as 5, 15 or 24 Volts can be supplied at the customer's request.

**Automatic "Reset":** All Latching version multiposition switches (or SPnT) cause the following scenario:

When a RF path is closed, it remains in the closed position after the voltage is cut-off (latching function). To switch to another path, the first path must be opened via a "RESET" driver, followed by the closing of the second RF path. Without the "RESET" driver, both paths would remain in the ON position at the same time.

To simplify the use of latching products, an "automatic RESET" is recommended. The auto reset feature is accomplished by an electronic circuit which brings about the automatic opening of a previously closed path during changes of position of the switches.

*Note: This option produces a higher current consumption during a few milliseconds (see voltage & current values listed on the product's individual Technical Data Sheet).*

### BCD (Binary Code Decimal) Driver Interface

BCD logic coding				RF & Microwave ways position
E4	E3	E2	E1	
0	0	0	0	Latching models: all ways in "OFF" position
0	0	0	0	Normally Open models: memory of last position
0	0	0	1	Way IN - 1 in "ON" position
0	0	1	0	Way IN - 2 in "ON" position
0	0	1	1	Way IN - 3 in "ON" position
0	1	0	0	Way IN - 4 in "ON" position
0	1	0	1	Way IN - 5 in "ON" position
0	1	1	0	Way IN - 6 in "ON" position
0	1	1	1	Way IN - 7 in "ON" position
1	0	0	0	Way IN - 8 in "ON" position
1	0	0	1	Way IN - 9 in "ON" position
1	0	1	0	Way IN - 10 in "ON" position
1	0	1	1	Way IN - 11 in "ON" position
1	1	0	0	Way IN - 12 in "ON" position
1	1	1	1	Latching models: memory of last position
1	1	1	1	Normally Open models: all ways are in "OFF" position

*Note: E1, E2, E3, E4 are BCD driver pins of the product. E4 applies only with 8 positions or more. E3 applies only 4 positions or more.*

**Break Before Make:** Radiall coaxial relays are considered "break before make". In a break before make product the contact of the first path leaves its state before the final contact has been established.

**Failsafe:** A switch with an actuator that contains a return mechanism, either mechanical or magnetic, that provides RF connection to one selected position when no voltage is applied to the power terminals. This type of switch requires continuous voltage to maintain RF connection to any other position.

**Frequency Range:** The frequency range for each device indicates the maximum frequency Radiall will guarantee for the products performance.

**Indicator Contacts:** Electrical contacts of an "open circuit, short-circuit" type, mechanically linked to the actuator and synchronized with switched RF paths, ensure the recopy of positions of RF transmission paths. When a microwave path is switched, the corresponding indicator contact is closed. It is generally used with pilot lamps to indicate position of RF contacts (characteristics are given for a resistive load).

## Glossary

**Intermodulation (PIM):** or intermod for short, is a form of signal distortion that occurs whenever signals of two or more frequencies are produced in a passive device which contains some linear response. This interference includes low contact pressure, dirty interconnects, magnetic materials or other anodic effect.

The typical value for Radiall switches is around 120 dBc (with 2 carriers at +43 dBm), however products can be designed for higher performance upon request.

**Isolation:** The RF leakage from a connected path to any connector outside that path. Isolation is measured in decibels below the input power.

**Latching:** A switch with an actuator that contains a mechanism, either mechanical or magnetic, that will maintain a chosen RF contact path whether voltage is maintained or not after switching is accomplished. A pulse length of a duration equal to the maximum switching time is enough to change the switch position.

**Life:** Number of toggles a product is able to carry out. Relays and switches of RAMSES, PLATINUM and TITANIUM ranges have a life cycle of 2 to 10 million cycles.

**Normally Open:** is a mode of operation in which all output ports of the switch are disconnected from the input port until a voltage is applied to a selected position.

Switches family	Type of		Pin number	Comments
	Series	Connector		
RAMSES SPDT	SPDT => R570	D-Sub (male)	9 pins	Available only on products described on page 2-20
	SPDT => R572	N/A		Only solder pins
PLATINUM SPDT	SPDT => R595	D-Sub (male)	9 pins	Non terminated models
RAMSES DPDT	DPDT => R577	D-Sub (male)	9 pins	--
TITANIUM DPDT	DPDT => R513	HE10 ribbon receptacle (male)	10 pins	Delivered with ribbon cable 750 mm (30 inches) + HE10 connector (female)
PLATINUM DPDT	DPDT => R593			
RAMSES DP3T (1)	DP3T => R585	N/A		Only solder pins
PLATINUM DP3T (1)	DP3T => R595	D-Sub (male)	9 pins	--
RAMSES & Subminiature SPnT	SPnT => R573/ R574 3 to 10 positions 11 and 12 positions	D-Sub (male)	25 pins	--
			44 pins	High density
	SPnT => R591 4 and 6 positions	Micro-D receptacle (female)	9 pins	--
TITANIUM SPnT	SPnT => R514 4 and 6 positions	HE10 ribbon receptacle (male)	16 pins	Delivered with ribbon cable 750 mm (30 inches) + HE10 connector (female)
PLATINUM SPnT	SPnT => R594 4 and 6 positions			

Note (1): Terminated RAMSES & PLATINUM SPDT are included in R585 & R595

**PLATINUM and TITANIUM series:** The RAMSES concept (without friction) and over 40 years of expertise in manufacturing coaxial switches, Radiall's introduces a new range of high performance coaxial switches to the market place: PLATINUM Series.

Following an increasing need in the instrumentation market, Radiall's PLATINUM coaxial switches are optimized for use in automatic test benches or measurement equipment. With a guarantee insertion loss repeatability of 0.03 dB over the life of the product (10 million), PLATINUM Series switches are perfectly suited for applications requiring excellent RF performance. The full range of coaxial switches, such as SPDT-DP3T (R595 series), transfer relay DPDT (R593 series) and multithrow switches SPnT (R594 series), offer the same level of RF performance and are suitable for use in stringent environments.

TITANIUM series offer the same RF performance as PLATINUM series. TITANIUM products are more economically priced due to the reduced number of life cycles guaranteed (2.5M vs 10M for PLATINUM). This product line is ideal for the Instrumentation market, where RF performance is more critical than the number of actuations guaranteed.

## Glossary

**Polarity:** A common negative polarity is chosen by Radiall for its standard products. An inverted polarity (common plus) is available on RAMSES range, contact Radiall for availability.

*Note: For PLATINUM and TITANIUM series, Common plus polarity potential is chosen for its standard products.*

**RF Power Chart:** The RF power rating is the capability of handling RF power (CW power) through closed contacts. The RF power should be removed during switching. Power ratings assume unity V.S.W.R. (matched load) at room temperature (25°C), sea level pressure (14.7 p.s.i.) and cold switching. See below the CW power capability Vs. Frequency Chart. Changes in these specifications require power derating (see derating factor versus V.S.W.R.).

This graph is based on the following conditions:

- Ambient temperature: +25°C
- Sea Level
- V.S.W.R.: 1:1 and cold switching

**Derating Factor:** The average power input must be reduced for load V.S.W.R. above 1:1.

## Glossary

**Peak Power Handling:** The maximum peak power, when applied at room temperature under a pulse of one microsecond every millisecond, will not permanently change the specifications of the switch. Power applied over this limit will alter the RF performance of the switch.

**Repeatability:** The maximum standard deviation in insertion loss specifications on each path over the life of the product. Insertion loss repeatability is specified for all PLATINUM series (0.03dB over 10 million) and all TITANIUM series (0.03dB over 2.5 million).

**RF Connectors:** RF connectors are 50 or 75 Ohms female, unless otherwise specified. The applicable mating dimensions, materials and finish are in accordance with applicable sections of international standard (MIL C 39012, DIN 47295).

NB RADIAL 75 Ohm coaxial switches are only available with DIN 1.6/5.6 (screw, snap and slide connector) and mini SMB RF connectors.

**Self Cut Off:** The ability of a switch to disconnect the actuator voltage as soon as the switching of the position is carried out. The system applies to latching relays and is achieved with solid state circuitry. Self Cut-Off time for our RAMSES coaxial switches is from 40ms to 120ms.

**Solder Pin:** RAMSES relays are equipped with solder pins for the control and indicator contacts. The maximum temperature during soldering should not exceed 250°C for 30 seconds or 300°C for 10 seconds for leadfree soldering process.

**Suppression Diodes:** Diodes connected in parallel with the coil of a switch to suppress transient voltage generated by the self inductance of the coil during the driver signal cut-off. This option is systematically enclosed in all TTL, SELF CUT-OFF and all electronic interfaces.

**Switching Time:** The total amount of time between applying voltage to the actuator terminals and the completion of switching (including all contact bounce - if any). Total switching time consists of three parts, namely inductive delay in the actuator coil, transfer time of the RF contacts, and bounce time of the RF contacts.

**TTL Driver Interface:** The interface of an electronic circuit which enables driving either relays or switches by TTL logic signals. Products equipped with this option have a pin for the voltage of the actuator (12 V or 28 V) as well as a TTL driver pin shared per position. The polarity is not relevant to applications for switches with this option. The logic used is positive, therefore high level nominal +5V (2.2 to 5.5 V) of TTL signal means logic «1» which enables the corresponding microwave way. Low level i.e logic contacts 0, voltage is 0-0.8 V.

**V.S.W.R.:** The Voltage Standing Wave Ratio is a measure of the return loss or level of the reflected signal of a device connected on a transmission line. V.S.W.R. is linked to the coefficient of reflection (r) by the equation:

$$VSWR = \frac{1+r}{1-r} \quad r = \frac{Z-Z_0}{Z+Z_0}$$

V.S.W.R. varies from 1 to ∞, a value equal to 1 represents a perfect matching

with:

“r” is the coefficient of reflection

“Z<sub>0</sub>” is the characteristic impedance of the line

“Z” is the impedance of the line

## RF Repeatability and Life Test Parameters

Radiall has built an Automatic Test Bench composed by a Vector Network Analyzer (VNA), Digital Multi-Meters (DMM), PC and a switch driver. This approach is to qualify over the complete life of the switch (2.5 million to 10 million cycles depending on switch models). This ATE extracts and stores the RF parameters or contacts resistances of the switch according to our own internal procedure. For each frequency point a calculation of VSWR, insertion loss and standard deviation are computed. All measurements are performed at room temperature (RF switch is toggled at 3Hz).

The curves in 3D illustrate the RF characteristics over 10 million switching cycles on SP6T-26.5GHz Ramses switch.

Insertion loss over 10 million cycles

Phase over 10 million cycle

The contribution due to only Rc can be calculated as follows:

$$RL = 20 \text{ Log}_{10} |\Gamma| = 20 \text{ Log}_{10} \frac{R_c}{2R_o + R_c}$$

$$VSWR = 1 + \frac{R_c}{R_o}$$

$$IL = 10 \text{ Log}_{10} \frac{R_o}{R_o + R_c}$$

The following curve shows RF contact resistance up to 10 million. Switch was toggled at 3Hz with Rc recorded each 50 cycles.

**Conversions**

**CONVERSION MEASUREMENT UNIT**

- Convert Inch to millimeters: 1 Inch=25.4mm / 1 meter=39.3 Inches
- Convert centimeters to feet: 1 foot=30.48 cm / 1 meter=3.28 feet
- Convert kilogram to pounds: 1 kg=2.20 Lb / 1 pound=0.45 kg

**DERATING TEMPERATURE INFORMATION**

The temperature at which the switches are used has an effect on the coil resistance. This is due to the temperature and variation of the resistivity of copper and the pick up voltage.

Formula of the variation of coil resistance versus the temperature is:

$R' = R (1 + K (t' - t))$

K = Temperature coefficient (0.0038 for copper)

R = Coil resistance (ohms) at temperature t (°C)

R' = Coil resistance (ohms) at temperature t' (°C)

**Example of calculation:**

Device: SPDT Failsafe R570413000

How to calculate current at 70°C with this relay?

In reference to specifications outlined in the technical data sheet:

Coil resistance 275 Ohms at 25°C ( R = 275, t = 25, t' = 70 )

Nominal current = 102 mA at 25°C

Nominal voltage = 28 volts

New coil resistance at 70°C will be:

$R' = 275 ( 1 + 0.0038 (70 - 25))$

$R' = 275 \times 2.71$

$R' = 323 \text{ Ohms}$

According to the Ohm law ( U = R I ), at 70°C:

$U = R \times I$

$I = 87 \text{ mA}$

User Handbook

**USER HANDBOOK FOR CONNECTOR ASSEMBLY ON COAXIAL SWITCHES**

When connecting RF coaxial connectors to Radiall switches precaution should be taken to avoid irreversible damage on the RF switches.

Use only connectors with the correct interface dimensions

To ensure appropriate torque on the connector, and avoid damage on the contacts it is recommended to use a specific tool with calibrated torque. Apply the recommended torque as shown below:

SMA Connectors	from 80 to 120 N.cm
TNC Connectors	265 N.cm

Connection of semi rigid cable using the center contact of the cables as pin for connecting the female connector

If the center contact is not in alignment with the female socket, the switch RF connector could be damaged.

Fig A: Misaligned pin between insulator and female contacts slots

RF connectors with removable nut allow visual confirmation that the center contact is correctly positioned.

Cable	Connector

## SMT Power Micro SPDT with 10 GHz Capabilities

### SURFACE MOUNT TECHNOLOGY

Patent pending

Actual Size

Typical Outline Drawing  
(All dimensions in mm)

An innovative and original "micro-mechanical" design of the R596 SMT micro-relay offers, excellent RF performance, reliability, and repeatability. The miniature size, and low installation cost make these coaxial switches an ideal solution.

Very low return loss and insertion loss allow this relay to be used in power applications, as well as in typical SMT relay applications such as RF attenuators, RF matrices, spectrum analysers, and telecommunications.

Failsafe models are offered in two RF configurations (direct and inverted). The association of these two products on the same PC board enables the product to perform the bypass function. (For bypass mounting, further information is available on page 2-8).

Example of P/N:

R596813100 is a SPDT SMT 8 GHz, 24 Vdc, failsafe, standard packaging.

### PART NUMBER SELECTION

(1): To be associated with a failsafe model, so as to achieve the "BYPASS" function (see application details on page 2-8)

(2): Non standard packaging symbols (2, 5, 9 or T) are not marked on the relay

(3): See details about test fixture dimensions on page 2-4

(4): Tape delivered without reel, available for all specific quantities up to 200 pieces

## SMT Power Micro SPDT with 10 GHz Capabilities

### SLIM LINE GENERAL SPECIFICATIONS

Operating mode		Failsafe (types 1 and 9)		Latching (type 3)	
Nominal operating voltage (across temperature range)	Vdc	12 (10.2 to 13)	24 (20.5 to 30)	12 (10.2 to 13)	24 (20.5 to 30)
Coil resistance at 23 °C (+/-10%)	Ω	330	1130	205	865
Operating current at 23 °C	mA	36	25	58	32
RF and command ports		1/2 hole gold plated, Infrared reflow, forced air oven or hand soldering (Compatible with lead free soldering processes)			
Switching time at nominal voltage	Making contacts Breaking contacts	Max 4ms (typical 1.8ms), including contact bounce time Max 1ms (typical 0.5ms)			
Life	- Cold switching (max 120 cycles/min) - Hot switching (max 20 cycles/min)	2 million cycles 500.000 cycles (1W, impedance 50Ω, V.S.W.R. < 1.25)			
Insulation		Dielectric test voltage		300 Vrms	
		Insulation resistance at 500Vdc		> 100 MOhms	
Environmental protection		Lead free construction - Waterproof (acc. To IEC 60529 / IP67)			
Mass		< 2g			
Operating temperature range (with no icing nor condensation)	°C	-25 to +85 (5)		-40 to +85	
Storage temperature range	°C	- 55 to +85			
Sine vibration (MIL STD 202, Method 204D)		- Condition D: 10-2000 Hz, 20g		operating	
		- Condition G: 10-2000 Hz, 30g		non operating	
Random vibration (MIL STD 202, Method 214A, Profile I)		- Condition F: 50-2000 Hz, 20.71g		operating	
		- Condition H: 50-2000 Hz, 29.28g		non operating	
Shocks (According to MIL STD 202, Method 213B, Cond. C)		100g / 6 ms, 1/2 sine		operating	

(5): Failsafe models may be used down to -40°C, but if coil remains permanently supplied at nominal voltage, the holding current value must be reduced from 45% to 55% to avoid internal condensation.  
(for more details, see Radiall application note AN-R596-51 on page 2-10).

Calibration board

Inputs/Outputs of the calibration board and test fixture are equipped with SMA type receptacle connectors (Radiall part number R125 510 000). The length of the RF tracks is the same on the calibration board and the test fixture circuits. The insertion loss of the relay itself is calculated by subtracting the insertion loss of the “calibration board” to the insertion loss of the “relay welded on the test fixture”.

(7): Relay soldered on Test Fixture is available. To order, please use the suffix "T" (part number R596 - - - - T), as explained in page 2-2.

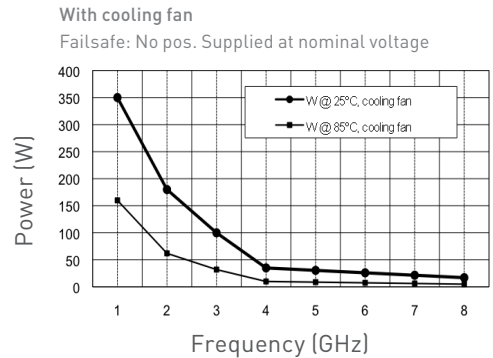

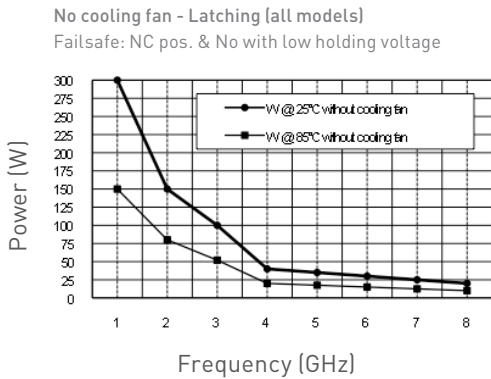

**SMT Power Micro SPDT with 10 GHz Capabilities**

**RF POWER RATING FOR COLD SWITCHING USE**

(Impedance 50 Ohms, V.S.W.R. < 1.25)

Power level depends on environmental conditions:

- R596 series have been designed to be used without a cooling fan even for high power applications. However, the power capability may be still improved by using the appropriate cooling fan.
- For failsafe models used with coil permanently supplied (N/O position), the same power level as latching models may be applied: see on application note N° AN-R596-51 on page 2-10, how to implement a “low holding current” function on your PC board, to avoid internal overheating and increase the RF power level.

**LIFE DERATING CURVE FOR HOT SWITCHING USE**

(Impedance 50 Ohms, V.S.W.R. < 1.25) General Specifications

Impedance 50Ω  
V.S.W.R. < 1.25  
max switching frequency:  
30 cycles per mn

### BYPASS APPLICATION

Failsafe Micro-relay typical implantation

SPDT relays (Single Pole Double Throw) can be used to achieve a bypass switch function. For SMT applications, R596 series, relays are available in two failsafe versions, standard and inverted, to provide symmetric RF ports implantation possibility. The “side by side” implementation of these two versions on a PCB effectively produces the bypass function. The package size is reduced and interconnecting tracks are shortened. Required in order to protect the receiver for transmit/receive applications. Depending on the distance between the two relays, this configuration can achieve high isolation levels, up to 80 dB @ 1GHz, 70 dB @ 2 GHz, and 60 dB @ 6GHz.

### BYPASS TYPICAL IMPLANTATION & PIN IDENTIFICATION

(Top View)

R596.X1X.XXX / R596.X9X.XXX

Voltage	RF continuity
De-energized	INPUT <--> OUTPUT (direct line)
Energized	INPUT <--> IN-DUT / OUT-DUT <--> OUTPUT

## SMT Power Micro SPDT with 10 GHz Capabilities

### RECOMMENDED SOLDERING PROCEDURE

#### A-Soldering procedure using automatic pick and place equipment

##### 1-Solder paste

R596 series are Lead free. Lead free Sn-Ag3.5-Cu0.7 solder cream may be used as well as standard Sn63-Pb35-Ag2. Radiall recommends using a no clean - low residue solder cream (5% solid residue of flux quantity) that will permit the elimination of the cleaning operation step after soldering.

Note: Due to the gold plating of the switch PCB interface, it is important to use a paste made with silver. This will help in avoiding formation of intermetallics as part of the solder joint.

##### 2-Solder paste deposition

Solder cream may be applied on the board with screen printing or dispenser technologies. For either method, the solder paste must be coated to appropriate thickness and shapes to achieve good solder wetting. Please verify that the edges of the zone are clean and without contamination and that the PCB zoned areas have not oxidized. The design of the mounting pads and the stenciling area are given on page 2-7, for a thickness of the silk-screen printing of 0.15 mm (0.006").

##### 3-Placement of the component

For small lightweight components such as chip components, a self-alignment effect can be expected if small placement errors exist. However, this effect is not as expected for relays components and they require an accurate positioning on their soldering pads, typically +/- 0.1mm (+/-0.004"). Place the relay onto the PCB with automatic pick and place equipment. Various types of suction can be used. Radiall does not recommend using adhesive agents on the component or on the PCB.

##### 4-Soldering: infra-red process

Please refer to the recommended temperature profile for infra-red reflow or forced air convection:

Higher temperature (>260°C) and longer process duration would permanently damage the switches.

##### 5-Cleaning procedure

On miniature relays, high frequency cleaning may cause the contacts to stick. If cleaning is needed, please avoid ultrasonic cleaning and use alcohol based cleaning solutions.

In-line cleaning process, spraying, immersion, especially under temperature, may cause a risk of degradation of internal contacts.

##### 6-Quality check

Verify by visual inspection that the component is centered on the mounting pads. For solder joints, verify by visual inspection that the formation of meniscus on the pads are proper, and have a capillarity amount at least a third of the height.

#### B- Soldering procedure by manual operation

##### 1-Solder paste and flux deposition

Refer to procedure A - 1

Deposit a thin layer of flux on mounting zone, and allow the flux to evaporate a few seconds before applying the solder paste, in order to avoid dilution of the paste.

##### 2-Solder paste deposition

Radiall recommends depositing a small amount of solder paste on the mounting zone area by syringe. Be careful, not to apply solder paste outside of the zone area.

##### 3-Placement of the component:

During manipulation, avoid contaminating the lead surfaces by contact with fingers. Place the component on the mounting zone by pressing on the top of the relay lid.

##### 4-Hand soldering

Iron wattage 30 to 60 W. Tip temperature 280 to 300°C for maximum 5 seconds to keep good RF characteristics above 3GHz. It is important to solder RF ports first, and apply pressure on the relay lid during all the soldering stage, to reduce the air gap between the PC board and the relay.

##### 5-Cleaning procedure

Refer to procedure A - 5

##### 6-Quality check

Verify by visual inspection that component is centred on the mounting pads. For solder joints, verify by visual inspection that the formation of meniscus on the pads are proper, and have a capillarity amount at least a third of the height.

### SMT Power Micro SPDT with 10 GHz Capabilities

#### APPLICATION NOTE AN-R596-051

Subject: How to use failsafe R596 micro-relays over all the guaranteed temperature range, in or condensation environmental conditions.

RF and electrical characteristics are guaranteed on all failsafe R596 switches over their operating temperature range (-25°C to +85°C), and under “no icing nor condensation” conditions.

In extreme applications, with failsafe models used at low temperature, continuously in the N/O position (coil permanently supplied), N/C contact failures may occur, due to the high gradient of temperature between the coil (heated by the permanent power 500mW) and the RF paths. N/O contact resistance remains satisfactory, but condensation deposits ice on the open contact N/C, and when power is cut, the N/C position is not correctly established.

Failsafe models can be continuously driven when energized from -40°C, if the coil is not permanently supplied at nominal voltage, and heating and internal condensation is avoided. Once the relay has switched, the operating voltage must be reduced by 50% +/-5%. This low holding voltage is possible on R596 series, as it is enough to maintain the switch in “energized” position (for instance 5.4V to 6.6V for a 12V model). Furthermore it allows the user to save energy, by combining the advantages of latching and failsafe models.

This “holding current” function can be achieved by the implementation of a simple electronic drive on the command PC Board (1 resistor, 1 diode and 1 capacitor), for 12V and 24V models. A typical circuit design is shown on the schematic below. A few milliseconds after switching, the current is divided by two, and the absorbed power is divided by four (i.e. 6V and 110mW for a 12V model).

To reduce the voltage by 50%, the value of resistance R must be equal to the total resistance of the switch coil:

- 12V models: 330 Ohms 1/4W
- 24V models: 1200 Ohms 1/4W

R596 FAILSAFE RELAY

## Applications

### EXAMPLE OF SMT APPLICATIONS

The SMT Series offers a large range of products which can be used in many applications such as:

- Tower mount amplifiers
- Instrumentation
- Military radios
- ECM equipment
- BTS
- Radio-Links
- Repeaters

These products offer the same RF Board and soldering process as all RF components but with a reduced weight and size. They are designed to meet all market specifications.

SLIM LINE SERIES

## SPDT up to 50 GHz

Pc Board - SMA - SMA 2.9 - 2.4mm - QMA - SMC - SMB - mini SMB - DIN 1.6/5.6

Radiall's RAMSES SPDT switches offer excellent reliability, high performance and operating frequencies from DC to 50 GHz. Radiall's RAMSES concept (which provides for a life span of 10 million cycles) offers a variety of options to meet customer needs.

These switches are dedicated to all market applications including: military, instrumentation and telecommunications.

Example of P/N:

R570413100 is a SPDT SMA 18 GHz, failsafe, 28 Vdc, with TTL driver, without option, solder pins.

### PART NUMBER SELECTION

I.C.: Indicator contact - S.C.O.: Self Cut-Off

(1): Suppression diodes are already included in Self Cut-OFF & TTL option

(2): Polarity is not relevant to application for switches with TTL driver

(3): Positive common shall be specified only with type 3, 4, 5 & 6 because failsafe switches can be used with both polarities

(6): Available only upon request

(4): The QLF trademark (Quick Lock Formula®) standard applies to QMA and QN series and guarantees the full intermateability between suppliers using this trademark. Using QLF certified connectors also guarantees the specified level of RF performances

(5): Connector SMA 2.9 is equivalent to "K connector®", registered trademark of Anritsu

## SPDT up to 50 GHz: Low Consumption & Reduced Size

SMA - SMA 2.9 - 2.4mm - QMA - SMC - SMB - mini SMB - DIN 1.6/5.6

Radiall's RAMSES R572 series are ideal for RF & microwave systems where low current consumption, reduced size, high performance and high reliability are required. Other options are also available as shown on this page.

These switches are perfect for all market applications including: industrial, instrumentation, defense and telecommunications.

Example of P/N:

R572432010 is a SPDT SMA 18 GHz, latching, 12 Vdc, positive common, solder pins.

## High performance SPDT up to 40 GHz

SMA - SMA 2.9

Radiall's PLATINUM series switches are optimised to perform at a high level over an extended life cycle, with outstanding RF performance, and a guaranteed insertion loss repeatability of 0.03 dB over a life span of 10 million switching cycles. PLATINUM series switches are perfect for automated test and measurement equipment, as well as signal monitoring devices.

Example of P/N:

R595443125 is a SPDT SMA 20 GHz, latching, 24Vdc, with TTL driver, Indicators, D-Sub connector.

### PART NUMBER SELECTION

**R 595**

**Frequency Range:**

- 3: SMA up to 6 GHz
- 4: SMA up to 20 GHz
- F: SMA up to 26.5 GHz
- 8: SMA 2.9 up to 40 GHz

**Type:**

- 3: Latching (1)
- 4: Latching + I.C. (1)
- 5: Latching + S.C.O. (1)
- 6: Latching + S.C.O. + I.C.(1)

**Actuator Voltage:**

- 3: 24 Vdc
- 7: 15 Vdc

I.C.: Indicator contact - S.C.O.: Self Cut-Off  
 (1): Suppression diodes are already included

**Documentation:**

- : Certificate of conformity
- C: Calibration certificate
- R: Calibration certificate + RF curves

**Actuator Terminals**

- 0: Solder pins
- 5: D-Sub connector

**Options:**

- 1: Without option (positive common)
- 2: Compatible TTL driver (high level)

**Switch model :**

- 1: Non terminated SPDT switch

## High performance SPDT up to 40 GHz

### SMA - SMA 2.9

#### GENERAL SPECIFICATIONS

Operating mode		Latching	
Nominal operating voltage (across temperature range)	Vdc	24 (24 to 30)	15 (12 to 20)
Coil resistance at 23°C (+/- 10%)	Ω	350	120
Operating current at 23°C	mA	68	125
TTL input	High level	3 to 7 Volts: 800µA max 7 Volts	
	Low level	0 to 0.8 Volts: 20µA max 0.8 Volts	
Switching time	ms	15	
Life (Min)	SMA	10 million cycles	
	SMA 2.9	5 million cycles	
Actuator terminals		D-Sub 9 pin female Solder pins	
Weight	g	60	

#### ENVIRONMENTAL SPECIFICATIONS

Operating temperature range	-25°C to + 75°C
Storage temperature range	-55°C to +85°C
Temperature cycling (MIL STD 202F, Method 107D, Cond.A)	-55°C to +85°C (10 cycles)
Sine vibration operating (MIL STD 202, Method 204D, Cond.D)	10 - 2000 Hz, 20g
Random vibration operating	16.91g (rms) 50-2000 Hz 3min/axis
Shock operating (MIL STD 202, Method 213B, Cond.G)	50g / 11ms, sawtooth
Humidity operating	15 to 95% relative humidity
Humidity storage (MIL STD 202, Method 106E, Cond.E)	65°C, 95% RH, 10 days
Altitude operating	15.000 feet (4.600 meters)
Altitude storage (MIL STD 202, Method 105C, Cond.B)	50.000 feet (15.240 meters)

### SWITCH MODEL: NON TERMINATED SPDT SWITCH

The non terminated SPDT switch is a single pole double throw switch. This switch is considered "break before make".

#### RF SCHEMATIC DIAGRAM

Position E1

Position E2

#### POSITION INDICATOR

State 11

State 22

#### Standard drive option "1"

##### (Positive common):

- Connect pin +Vcc to supply (+20 Vdc to +32 Vdc)
- Select desired RF path by applying ground to the corresponding "close" pin (Ex: ground pin E1 to switch to position E1. RF path 1-2 closed and RF path 2-3 open)
- To open desired path and close the new RF path, connect ground to the corresponding "close" pin (Ex: ground pin E2 to open RF path 1-2 and close RF path 2-3)

#### TTL drive option "2"

- Connect pin GND to ground
- Connect pin +Vcc to supply (+20 Vdc to +32 Vdc)
- Select (close) desired RF path by applying TTL "High" to the corresponding "drive" pin (Ex: apply TTL "High" to pin E1 to switch to position E1. RF path 1-2 closed and RF path 2-3 open)
- To open desired path and close the new RF path, apply TTL "High" to the "drive" pin which corresponds to the desired RF path (Ex: apply TTL "High" to pin E2)

## High performance SPDT up to 40 GHz

SMA - SMA 2.9

### RF POWER RATING CHART

This graph is based on the following conditions:

- Ambient temperature: + 25°C
- Sea level
- V.S.W.R.: 1 and cold switching

### DERATING FACTOR VERSUS VSWR

The average power input must be reduced for load V.S.W.R. above 1:1

## Optional Features for SPDT

### GENERAL

All miniature SPDT switches fitted with SMA, QMA, SMC, SMB or SMA2.9 connectors can be delivered with 34 mm narrow width RF body. Contact Radiall sales directly for availability.

Examples of dedicated application options:

SMA SPDT with a SINGLE input TTL driver. This option is available in a latching configuration upon special request. Key advantages include less wires and easier connection.

SPDT with HN coaxial connectors and MILC38999 circular connector for L band airborne applications.

SPDT models available for high power military applications (up to 100 watts CW from DC to 18 GHz).

A SP4T design up to 8 GHz with SMT relays mounted on a PCB fitted with UMP (Ultra Miniature Pressure) contact. Various switching configurations can be designed according to your specific requests.

A SMA SPDT with a specific RF body (with mounting leg) for easy mounting on front panel of switching matrix.

Note: TTL driver is already included for the 1, 3, 5 and 7 switch models of the RAMSES R585 series.  
 Example of P/N: R585832000 is a DP3T SMA2.9 40 GHz, latching, 12 Vdc, without option, solder pins.

\*For part number creation and available options, see detailed part number selection for each series.

## DP3T and Terminated SPDT up to 40 GHz

### SMA - SMA 2.9

Radiall's RAMSES DP3T and Terminated SPDT switches offer excellent reliability, high performance and operating frequencies from DC to 40 GHz. A full range of options are available within the RAMSES range in order to offer customers a complete solution.

These relays are dedicated to market applications including: defense, instrumentation and telecommunication.

Example of P/N:

R585423300 is a SPDT terminated SMA 18GHz, failsafe, 28Vdc, indicator contacts, internal terminations without TTL drivers and solder pins.

### PART NUMBER SELECTION

## R 585

#### RF Connectors:

- 3: SMA up to 3 GHz
- 4: SMA up to 18 GHz

### ENVIRONMENTAL SPECIFICATIONS

Operating temperature range	-25°C to +75°C
Storage temperature range	-55°C to +85°C
Temperature cycling (MIL STD 202F, Method 107D, Cond.A)	-55°C to +85°C (10 cycles)
Sine vibration operating (MIL STD 202, Method 204D, Cond.D)	10-2000 Hz, 20g
Random vibration operating	16.91G (rms) 50-2000 Hz 3min/axis
Shock operating (MIL STD 202, Method 213B, Cond.G)	50g / 11ms, sawtooth
Humidity operating	15 to 95% relative humidity
Humidity storage (MIL STD 202, Method 106E, Cond.E)	65°C, 95% RH, 10 days
Altitude operating	15,000 feet (4,600 meters)
Altitude storage (MIL STD 202, Method 105C, Cond.B)	50,000 feet (15,240 meters)

High performance DP3T & Terminated SPDT up to 40 GHz

## High performance DP3T & Terminated SPDT up to 40 GHz

SMA - SMA 2.9

### SWITCH MODEL: TERMINATED SPDT SWITCH

The terminated SPDT switch is a single pole double throw switch where unused ports are terminated into 50 ohms. This switch is considered a “break before make”.

### RF SCHEMATIC DIAGRAM

Position E1

Position E2

### POSITION INDICATORS

State 11

State 22

#### Standard drive option “1”

(Positive common):

- Connect pin +Vcc to supply (+20 Vdc to +32 Vdc)
- Select desired RF path by applying ground to the corresponding "close" pin (Ex: ground pin E1 to switch to position E1. RF path 1-2 closed and RF path 2-3 open)
- To open desired path and close the new RF path, connect ground to the corresponding "close" pin (Ex: ground pin E2 to open RF path 1-2 and close RF path 2-3)

D-sub Connector

Solder Pins

#### TTL drive option “2”

- Connect pin GND to ground
- Connect pin +Vcc to supply (+20 Vdc to +32 Vdc)
- Select (close) desired RF path by applying TTL "High" to the corresponding "drive" pin. (Ex: apply TTL "High" to pin E1 to switch to position E1. RF path 1-2 closed and RF path 2-3 open)
- To open desired path and close the new RF path, apply TTL "High" to the "drive" pin which corresponds to the desired RF path. (Ex: apply TTL "High" to pin E2 to open RF path 1-2 and close RF path 2-3)

D-sub Connector

Solder Pins

High performance DP3T & Terminated SPDT up to 40 GHz

SWITCH MODEL: TERMINATED SPDT SWITCH

With D-Sub connector

With solder pins

All dimensions are in inches/millimeters

Connectors	A max (inches / mm)	B max (inches / mm)	Terminations
SMA up to 26.5 GHz	0.291 / 7.40	0.067 / 1.70	Internal
SMA 2.9 up to 40 GHz	0.248 / 6.30	0.748 / 19.0	External

## High performance DP3T & Terminated SPDT up to 40 GHz

SMA - SMA 2.9

### SWITCH MODEL: TERMINATED 4 PORT SWITCH

The terminated 4 port bypass switch can terminate into the 50 ohms device under test.

This switch is considered a “break before make”.

### RF SCHEMATIC DIAGRAM

Position E1

Position E2

### POSITION INDICATORS

State 11

State 22

#### Standard drive option “1”

##### (Positive common):

- Connect pin +Vcc to supply (+20 Vdc to +32 Vdc)
- Select desired RF path by applying ground to the corresponding "close" pin (Ex: ground pin E1 to switch to position E1. RF path 1-2 and RF path 3-4 closed and RF path 2-3 open)
- To open desired path and close the new RF path, connect ground to the corresponding "close" pin (Ex: ground pin E2 to open RF path 1-2 and 3-4 and close RF path 2-3)

D-Sub connector

Solder pins

#### TTL drive option “2”:

- Connect pin GND to ground
- Connect pin +Vcc to supply (+20 Vdc to +32 Vdc)
- Select (close) desired RF path by applying TTL "High" to the corresponding "drive" pin (Ex: apply TTL "High" to pin E1 to switch to position E1. RF path 1-2 and 3-4 closed and RF path 2-3 open)
- To open desired path and close the new RF path, apply TTL "High" to the "drive" pin which corresponds to the desired RF path (Ex: apply TTL "High" to pin E2 to open RF path 1-2 and 3-4 and close RF path 2-3)

SWITCH MODEL: TERMINATED 4 PORT BYPASS SWITCH

With D-Sub connector

With solder pins

All dimensions are in inches/millimeters

Connectors	A max (inches / mm)	B max (inches / mm)	Terminations
SMA up to 26.5 GHz	0.291 / 7.40	0.067 / 1.70	Internal
SMA 2.9 up to 40 GHz	0.248 / 6.30	0.748 / 19.0	External

## High performance DP3T & Terminated SPDT up to 40 GHz

SMA - SMA 2.9

### SWITCH MODEL: 5 PORT DP3T SWITCH

The non terminated 5 port DP3T switch can be used as SPDT with high power terminations, as a bypass switch.

In this application, the fifth port can be terminated externally with a high power termination.

These switches are considered a "break before make".

## High performance DP3T & Terminated SPDT up to 40 GHz

SMA - SMA 2.9

### POWER RATING CHART

This graph is based on the following conditions:

- Ambient temperature: + 25°C
- Sea level
- V.S.W.R.: 1 and cold switching

### DERATING FACTOR VERSUS V.S.W.R.

The average power input must be reduced for load V.S.W.R. above 1.1

## Optional features for DP3T switches

### GENERAL

RADIALL DP3T / SPDT terminated are designed only with SMA connectors.

For all other connectors (N, BNC etc.), the same function as SPDT terminated can be easily performed with a standard DPDT and an external load.

**POS 1 : J1 to J2 / J3 to load**

### Examples of dedicated applications

This SPDT terminated switch is composed of a DP3T with SMA connectors, and cable load for medium power terminations. The Key advantage of this solution is the ability to mount the switch with external terminations at the desired power level.

This is an example of an SPDT terminated switch that was designed with 2 separate coils for a specific test network application.

Example of P/N: R577412020 is a DPDT SMA 18 GHz failsafe, 12 Vdc, without TTL driver, solder pins with bracket.

\*For part number creation and available options, see detailed part number selection for each series.

## DPDT up to 40 GHz

SMA – SMA 2.9 – QMA – DIN 1.6/5.6

Radiall's DPDT switches offer excellent reliability, high performance and operating frequencies from DC to 40 GHz. Radiall's RAMSES concept guarantees a life span of 2.5 million cycles and provides a full array of options to respond to the needs of our customers.

These relays are well suited for applications across all markets including: Defense, Instrumentation, and Telecom.

Example of P/N:

R577F63105 is a DPDT SMA 26.5 GHz latching with Indicators, Self Cut-Off, 28 Vdc, TTL driver, D-Sub connector.

### PART NUMBER SELECTION

**R 577**

**RF Connectors:**

- 3: SMA up to 3 GHz
- E: QMA up to 6 GHz
- 4: SMA up to 18 GHz
- F: SMA up to 26.5 GHz
- 8: SMA 2.9 up to 40 GHz (5)
- 9: DIN 1.6/5.6 up to 2.5 GHz

**Type:**

- 1: Failsafe
- 2: Failsafe + I.C.
- 3: Latching
- 4: Latching + I.C.
- 5: Latching + S.C.O. (1)
- 6: Latching + S.C.O. + I.C. (1)

**Actuator Voltage:**

- 2: 12 Vdc
- 3: 28 Vdc

**Actuator Terminals and fixing:**

- 0: Solder pins with bracket
- 2: Solder pins without bracket
- 5: D-Sub connector with bracket
- 7: D-Sub connector without bracket

**Options:**

- 0: Without option
- 1: Positive common (2) (3)
- 3: With suppression diodes (1)
- 4: With suppression diodes and positive common (2) (3)

**TTL Option:**

- 0: Without TTL Driver
- 1: With TTL Driver (high level) (1) (2)

I.C.: Indicator contact - S.C.O.: Self Cut-Off

1: Suppression diodes are already included in self cut-off & TTL option

2: Polarity is not relevant to application for switches with TTL driver

3: Positive common shall be specified only with type 3,4,5 and 6 because failsafe switches can be used with both polarities

(4): The QLF trademark (Quick Lock Formula®) standard applies to QMA and QN series and guaranties the full intermateability between suppliers using this trademark. Using QLF certified connectors also guarantees the specified level of RF performance.

(5): Connector SMA2.9 is equivalent to "K connector®", registered trademark of Anritsu

**DPDT up to 40 GHz**

### BOTTOM VIEW

## High Performance DPDT

Titanium Series / DPDT up to 40 GHz

Radiall's TITANIUM series switches are optimised to perform at a high level over an extended life cycle. With outstanding RF performance, and a guaranteed insertion loss repeatability of 0.03 dB over a life span of 2.5 million switching cycles. Radiall's TITANIUM switches are perfect for automated test and measurement equipment, as well as signal monitoring devices.

Example of P/N:

R513473148 is a DPDT SMA 20 GHz, latching, Self Cut-Off, diodes, positive common, TTL driver, Indicators, HE10 receptacle with bracket.

### PART NUMBER SELECTION

**R 513**

**RF Connectors:**

- 3: SMA up to 6 GHz
- 4: SMA up to 20 GHz
- F: SMA up to 26.5 GHz
- 8: SMA2.9 up to 40 GHz (2)

**Type:**

- 7: Latching + Self cut-off + Indicators

**Actuator Voltage:**

- 3: 24 Vdc

**TTL Option:**

- 1: With TTL driver (high level)

**Documentation:**

- : Certificate Of conformity
- C: Calibration certificate
- R: Calibration certificate + RF curves

**Actuator Terminals and Fixing:**

- 8: HE 10 receptacle with bracket (1)
- 9: HE 10 receptacle without bracket (1)

**Option:**

- 4: With suppression diodes and positive common

(1): Delivered with 750 mm (30 inches) ribbon cable + HE10 connector  
 (2) Connector SMA2.9 is equivalent to "K connector®" registered trademark of Anritsu.

## High Performance DPDT

## High Performance DPDT

Titanium Series / DPDT up to 40 GHz

### DRIVING THE SWITCH

Transfer switches are configured with two positions. Each RF path can be closed by applying ground or TTL "High" to the corresponding "driver" pin.

Mating cable connector

### RF SCHEMATIC DIAGRAM

	RF continuity	Indicator
Position 1	1-2 / 3-4	ICom - I1
Position 2	1-3 / 2-4	ICom - I2

#### Standard drive

- Connect pin 9 to ground (See note)
- Connect pin 1 to supply (+20 VDC to +32 VDC)
- Select (close) desired RF paths by applying ground to the corresponding "drive" pin (Ex: apply ground to pin 3 to close RF path 1-2 and 3-4)
- To select the second path, ensure that the unwanted RF path "drive" pin is disconnected from ground. Apply ground to the "drive" pin which corresponds to the desired RF paths  
(Ex: apply ground to pin 5 to close RF path 1-3 and 2-4)

#### TTL drive (Dual line)

- Connect pin 9 to ground
- Connect pin 1 to supply (+20 VDC to +32 VDC)
- Select (close) desired RF path by applying TTL "High" to the corresponding "drive" pin (Ex: apply TTL "High" to pin 7 and TTL "Low" to pin 8 to close RF paths position 1)
- To select the second path, ensure that the unwanted RF path "drive" pins are in TTL "Low" position. Apply TTL "High" to the "drive" pin which correspond to the desired RF path and TTL "low" to the undesired. (Ex: apply TTL "High" to pin 8 and TTL "Low" to pin 7 to close RF paths position 2)

#### TTL drive (Single line)

- Connect pin 9 to ground
- Connect pin 1 to supply (+20 VDC to +32 VDC)
- Connect pin 8 to TTL "High"
- Select (close) position 1 by applying TTL "High" to pin 7  
(Ex: apply TTL "High" to pin 7 to close RF paths 1-2 and 3-4)
- Select position 2 by applying TTL "Low" to pin 7  
(Ex: apply TTL "Low" to pin 7 to close RF paths 1-3 and 2-4)

#### Note

Pin 9 does not need to be grounded for the switch to operate in standard drive. If pin 9 is not grounded, the position indicators will only function while the appropriate drive is applied. Therefore, if a pulse drive is used and continuous indicator operation is required, pin 9 must be grounded.

## High Performance DPDT

Titanium Series / DPDT up to 40 GHz

### RF PERFORMANCES

	Pin number	Function
	2	Indicator Common
	4	Indicator Position '1'
	6	Indicator Position '2'

The electronic position indicators use photo-MOS transistors which are driven by the mechanical position of the RF paths moving elements. The circuitry consists of a common which can be connected to an output corresponding to selected RF path. The photo-MOS transistors are configured for AC and/or DC operation. The electronic position indicators require the supply (20 to 32 VDC) to be connected to pin 1 and ground connected to pin 9.

## Optional Features for DPDT Switches

### GENERAL

A microwave circuit or component can be inserted into a transmission line by using a DPDT switch as a by-pass product. In event that the short-circuit of the microwave circuit or component is undesirable, the J1/J3 path can be left out (see application option below).

#### Examples of dedicated application options:

This DPDT with a cable load is used for redundancy purposes for 2 amplifiers, one working, the other one in stand-by.

This true By-pass Switch is based on a DPDT with only 3 ways instead of 4.

Component inserted in J2/J4  
 POS 1: J1 to J3: Direct line  
 POS 2: J1 to J3: Component line

This DPDT has been fitted with a specific bracket to fulfill a specific customer request.

Subminiature DPDT developed for test bench applications requiring low RF leakage.

\*For part number creation and available options, see detailed part number selection for each series.

## SUBMINIATURE SPnT up to 40 GHz

SMA – SMA 2.9 – QMA

Radiall's R591 coaxial subminiature switches have a typical operating life exceeding 25 million cycles. Providing excellent RF performance, repeatability, and a guaranteed life of 10 million cycles make these switches ideal for Automated Test Equipment (ATE) and other measurement applications. These subminiature switches are also an excellent choice for Mil/Aero applications due to their small size, light weight, and outstanding shock and vibration handling capabilities.

Example of P/N:

R591302420 is a SP4T SMA up to 6 GHz, Normally open, 12 Vdc with TTL driver and solder pins.

### PART NUMBER SELECTION

(1): Available with "solder pins" models only

(2): Polarity is not relevant to application for switches with TTL driver

(3): Suppression diodes are already included with TTL option

(4): Available with "normally open" models only

(5): The QLF trademark (Quick Lock Formula®) standard applies to QMA and QN series and guarantees the full intermateability between suppliers using this trademark.

Using QLF certified connectors also guarantees the specified level of RF performances.

(6): Connector SMA2.9 is equivalent to "K connector®", registered trademark of Anritsu

## SUBMINIATURE SPnT up to 40 GHz

SMA – SMA 2.9 – QMA

### GENERAL SPECIFICATIONS

Operating mode		Normally open		Latching	
Nominal operating voltage (across operating temperature)	Vdc	12 (10.2 / 13)	28 (21 / 30)	12 (10.2 / 13)	28 (21 / 30)
Coil resistance (+/-10%)	Ω	48	250	60	285

\*Available with "solder pins" models only.

## SPnT Terminated & non Terminated up to 40 GHz

SMA – SMA 2.9 – QMA - DIN 1.6 / 5.6

### GENERAL SPECIFICATIONS

#### Type 2, 3, 4 and 5:

Latching models have a RESET pin which commands the reset of all positions. This command should be used before switching from one position to another. If not, two positions will be set at the same time.

Note: During the RESET operation the global current is: the nominal operating current multiplied by the number of positions.

#### Type 8, 9:

Latching models with AUTOMATIC RESET are available; these products have an internal SET/RESET circuit which automatically resets all the non-selected positions and sets the desired position. This option simplifies the use of latching switches by suppressing the RESET command in switching sequence.

An electronic circuit supplies successively groups of 2, 3 or 4 actuators, in order to limit the maximum current.

The current with this option is the total current of 2, 3 or 4 reset coils in the same time (see table below).

Example: During the AUTOMATIC RESET operation, at 28 Vdc, 4 position switch has a temporary consumption of only 250 mA, during 40 ms maximum.

### SWITCHING SEQUENCE

#### For SP6 to 8T

#### For SP9 to 12T

n = number of positions

Operating Total Current At 23 ° C (mA) SPnT Latching				
Number of positions	12 Volts		28 Volts	
	Manual Reset	Automatic Reset	Manual Reset	Automatic Reset
3 to 4	320 x n	640	125 x n	250
5 to 8	320 x n	960	125 x n	375
9 to 12	320 x n	1280	125 x n	500

Availability of options according to both type and number of positions

Type	Numbers of positions	Available options
0 or 1	3 to 12	0 - 1 - 2 - 3 - 4 - 8

## SPnT up to 12.4 GHz - RAMSES Concept

N - BNC - TNC

Radiall's R573 & R574 multithrow coaxial switches are offered in many configurations (over 40,000 possible combinations) including Terminated and non Terminated options. Radiall offers reliable products, with shorter delivery times and competitive pricing. Excellent typical RF performance make RAMSES switches (12.4 GHz) ideal for Automated Test Equipment (ATE) and other measurement applications.

These switches are suitable for defense, industrial, and telecommunication applications.

Example of P/N:

R573103600 is a SP6T N up to 12.4 GHz, Normally Open, 28 Vdc, and solder pins.

### PART NUMBER SELECTION

**R 57**

**Model:**

- 3: Without 50 Ω termination
- 4: With 50 Ω termination

**RF Connectors:**

- 0: N up to 3 GHz
- 1: N up to 12.4 GHz (9)
- 2: BNC up to 3 GHz (4) (5)
- 5: TNC up to 3 GHz (4) (5)
- 6: TNC up to 12.4 GHz (4) (5)

**Type:**

- 0: Normally open
- 1: Normally open + I.C.
- 2: Latching
- 3: Latching + I.C.
- 4: Latching + S.C.O. (1) (4)
- 5: Latching + S.C.O. + I.C. (1) (4)
- 8: Latching + S.C.O. + A.R. (1)
- 9: Latching + S.C.O. + I.C. + A.R. (1)

**Actuator Voltage:**

- 2: 12 Vdc
- 3: 28 Vdc

**Actuator Terminals:**

- 0: Solder pins
- 5: D-Sub connector

**Options:\***

- 0: Without option
- 1: Positive common (2) (6)
- 2: Compatible TTL driver (1) (8)
- 3: With suppression diodes
- 4: With suppression diodes and positive common (2) (6)
- 8: BCD TTL driver compatible (1) (3) (7) (8)

**Number of positions:**

- 3: 3 Positions
- 4: 4 Positions
- 5: 5 Positions
- 6: 6 Positions
- 7: 7 Positions
- 8: 8 Positions
- 9: 9 Positions
- 0: 10 Positions
- 1: 11 Positions
- 2: 12 Positions

I.C.: Indicator contact / S.C.O.: Self Cut-Off / A.R.: Auto Reset

(1): These models are already equipped with suppression diodes

(2): Standard products are equipped with negative common

(3): Latching BCD driver enables also a global reset through driver code 0000

(see BCD logic coding page 1-13)

(4): Available only up 6 positions

(5): Model "3" only

(6): Option not available for type 4, 5, 8 and 9

(7): Option available only with type 0, 1, 8 and 9

(8): Polarity is not relevant to application for switches with TTL driver

(9) 7 to 12 positions are available only up to 8 GHz

\*For precisions see availability of options chart page 5-21

## SPnT up to 12.4 GHz - RAMSES Concept

N - BNC - TNC

### GENERAL SPECIFICATIONS

#### Type 2, 3, 4 and 5:

Latching models have a RESET pin which commands the reset of all positions. This command should be used before switching from one position to another. If not, two positions will be set at the same time.

Note: During the RESET operation the global current the nominal operating current multiplied by the number of positions.

#### Type 8, 9:

Latching models with AUTOMATIC RESET are available; these products have an internal SET/RESET circuit which automatically resets all the non-selected positions and sets the desired position. This option simplifies the use of latching switches by suppressing the RESET command in switching sequence.

An electronic circuit supplies successively groups of 2, 3 or 4 actuators, in order to limit the maximum current.

The current with this option is the total current of 2, 3 or 4 reset coils in the same time (see table below).

Example: During the AUTOMATIC RESET operation, at 28 Vdc, 4 position switch has a temporary consumption of only 250 mA, during 40 ms maximum.

### SWITCHING SEQUENCE

For SP6 to 8T

For SP9 to 12T

n = number of positions

Operating Total Current At 23 ° C (mA) SPnT Latching				
Number of positions	12 Volts		28 Volts	
	Manual reset	Automatic reset	Manual reset	Automatic reset
3 to 4	320 x n	640	125 x n	250
5 to 8	320 x n	960	125 x n	375
9 to 12	320 x n	1280	125 x n	500

Availability of options according to both type and number of positions

Type	Numbers of positions	Available options
0 or 1	3 to 12	0 - 1 - 2 - 3 - 4 - 8
2 or 3	3 to 6	0 - 1 - 2 - 3 - 4
	7 to 12	0 - 1 - 3 - 4
4 or 5	3 to 6	0 - 2
	7 to 12	Not available
8 or 9	3 to 12	0 - 2 - 8

**ACCESSORIES**

A printed circuit board interface connector has been designed for easy mounting on terminals (must be ordered separately). Refer to page 5-27 for details.

## Accessories - RAMSES Concept

### All Connectors

## PRINTED CIRCUIT BOARD INTERFACE CONNECTOR

A printed circuit board interface connector (ordered separately) has been designed for easy mounting on terminals.

For SPnT model R573 and R574 series: Radiall part number: **R599 906 000 for 3 to 6 positions**

**R599 908 000 for 7 to 8 positions**

**R599 900 000 for 9 to 10 positions**

**R599 902 000 for 11 to 12 positions**

**R599906000**

**R599902000**

**R599908000**

**R599900000**

## Accessories - RAMSES Concept

### All Connectors

#### MOUNTING BRACKET

A metal bracket has been designed for an easy mechanical mounting of our SPnT switches for customer installation. These brackets must be ordered separately and assembled according to our recommended process on the following page.

#### MOUNTING BRACKET

## Accessories - RAMSES Concept

### All Connectors

#### FOR MODELS WITH CONNECTORS SMA, QMA, SMA 2.9, DIN 1.6/5.6

Number of positions	Type	Options	Model	Part number
3 to 6 positions	All	2 & 8	R573 series	R599920000
	4, 5, 8, & 9	All	R574 series	
	All	All	R573 series	
7 & 8 positions	All	All	R573 series	R599920000
			R574 series	
9 & 10 positions	All	All	R573 series	R599921000
			R574 series	
11 & 12 positions	All	All	R573 series	R599921000
			R574 series	

#### FOR MODELS WITH CONNECTORS N, TNC, BNC

Number of positions	Type	Options	Model	Part number
3 to 6 positions	All	All	R573 series	R599921000
			R574 series	
7 to 12 positions	All	All	R573 series	Not Available
			R574 series	

#### Adhesive Bonding Process

- 1) Clean the can with alcohol (Isopropanol or Ethanol).
- 2) Remove the protective adhesive tape surface.
- 3) Glue the mounting bracket ONLY on the blue can and NOT on the RF body.

DO NOT glue mounting bracket on the marking (See drawing).

- 4) Firmly press the mounting bracket against the can, and maintain pressure for several seconds (10 seconds min) to properly bond the unit (See notes 1 & 2).

- 5) The switch can now be installed on your equipment with 4 screws (not included).

## Accessories - RAMSES Concept

### All Connectors

### MOUNTING SQUARE FLANGE

A square flange has been designed for easy mechanical mounting of our SPnT switches for customer installation. These flanges must be ordered separately (similar to the mounting bracket) and assembled according to our recommended process

Typical Outline Drawing

Material: Aluminium with Cr3 passivation

### All Connectors

#### D-SUB CONNECTOR LOCATION

#### ASSEMBLY INSTRUCTIONS

- 1) Assemble the square flange on the RF body of the switch as the following drawing below.  
ATTENTION: Don't forget to correctly position the reference in line with the mark for port 1.
- 2) Tighten the 4 screws (delivered with the square flange).

reference mark of port 1

Examples of dedicated application options

4P3T with redundancy channel on Out 4  
In 1 to Out 1, In 2 to Out 2, In 3 to Out 3

7P6T

SP6T terminated with External terminations

A Custom Matrix Switch ( 4P3T ) with 4 Input ports and 4 Output ports configured for 3 transmission systems and one redundancy

channel (N+1: N type). This product can be used also as a SP4T Terminated with low external VSWR or medium power terminations.

## High Performance Multiport Switches

TITANIUM Series / SPnT up to 40 GHz

Radiall's TITANIUM switches are optimized to perform at a high level over an extended life cycle. With outstanding RF performance, and a guaranteed insertion loss repeatability of 0.03 dB over a life span of 2.5 million switching cycles, Radiall's TITANIUM switches are a perfect solution for automated test and measurement equipment, as well as signal monitoring devices.

Example of P/N:

R514F73617 is a SP6T SMA up to 26.5 GHz, Latching, Indicators, Self cut-off, Auto-Reset, 24 Vdc and HE10 receptacle.

### PART NUMBER SELECTION

**R 51**

**Models:**

- 2: Without 50 Ω terminations
- 4: With 50 Ω terminations

**RF Connectors:**

- 3: SMA up to 6 GHz
- 4: SMA up to 20 GHz
- F: SMA up to 26.5 GHz
- 8: SMA 2.9 up to 40 GHz (1)

**Type:**

- 7: Latching + Self cut-off + Auto Reset + Indicators

**Actuator Voltage:**

- 3: 24 Vdc

**Documentation:**

- : Certificate Of Conformity
- C: Calibration certificate
- R: Calibration certificate + RF curves

**Actuator Terminal:**

- 7 : HE 10 receptacle, delivered with 750 mm (30 inches) ribbon cable + HE10 connector

**Options:**

- 1: Positive common (without TTL)
- 2: TTL/5V logic with 24 Vdc supply

**Number of positions:**

- 4: 4 Positions
- 6: 6 Positions

(1) connector SMA 2.9 is equivalent to "K connector®", registered trademark of Anritsu.

## High Performance Multiport Switches

TITANIUM Series / SPnT up to 40 GHz

### ELECTRONIC POSITION INDICATORS

The electronic position indicators use photo-MOS transistors which are driven by the mechanical position of the RF paths moving elements. The circuitry consists of a common which can be connected to an output corresponding to a selected RF path. If one or several RF paths are closed, the corresponding indicators are connected to the common. The photo-MOS transistors are configured for AC and/or DC operation. The electronic position indicators require the supply (20 to 32 VDC) to be connected to pin 1 and ground connected to pin 15.

Ways 1 and 4 are not connected for SP4T switches.

## High Performance Multiport Switches

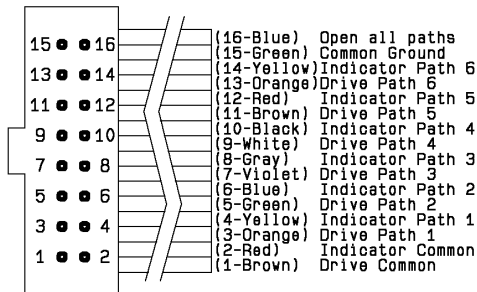

TITANIUM Series / SPnT up to 40 GHz

### TYPE 7: WITH TTL (OPTION "2") / WITHOUT TTL (OPTION "1") AND INDICATORS

Each RF path can be closed by applying ground or TTL "High" for option 2 to the corresponding "drive" pin. In general, except for Make-Before-Break drive, all other RF paths are simultaneously opened by internal logic.

Switch connector

Mating cable connector

#### Standard drive option "1":

- Connect pin 15 to ground
- Connect pin 1 to supply (+20 VDC to +32 VDC)
- Select (close) desired RF path by applying ground to the corresponding "drive" pin (Ex: apply ground to pin 3 to close RF path 1)
- To select another path, ensure that all unwanted RF path "drive" pins are disconnected from ground (to prevent multiple RF path engagement), then apply ground to the "drive" pin which corresponds to the desired RF path
- To open all RF paths, ensure that all RF path "drive" pins are disconnected from ground. Complete the operation by applying ground to pin 16

#### TTL drive option "2":

- Connect pin 15 to ground
- Connect pin 1 to supply (+20 VDC to +32 VDC)
- Select (close) desired RF path by applying TTL "High" to the corresponding "drive" pin (Ex: apply TTL "High" to pin 3 to close RF path 1)
- To select another path, ensure that all unwanted RF path "drive" pins are in TTL "low" position (to prevent multiple RF path engagement), then apply TTL "high" to the "drive" pin which corresponds to the desired RF path
- To open all RF paths, ensure that all RF path "drive" pins are in TTL "Low" position. Complete the operation by applying TTL "High" to pin 16

#### Break-Before-Make:

Open the undesired RF path for at least 15 minutes (minimum), then close the new RF port

#### Make-Before-Break:

Ensure that the previously selected RF path "drive" is connected to ground (or TTL "High" for option "2"), then close the new RF path

Ways 1 and 4 are not connected for SP4T switches.

## High Performance Multiport Switches

PLATINUM Series / SPnT terminated up to 40 GHz

### ELECTRONIC POSITION INDICATORS

#### THIS OPTION IS NOT AVAILABLE WITH TYPE 4

The electronic position indicators use photo-MOS transistors which are driven by the mechanical position of the RF paths moving elements. The circuitry consists of a common which can be connected to an output corresponding to selected RF path. If one or several RF paths are closed, the corresponding indicators are connected to the common. The photo-MOS transistors are configured for AC and/or DC operation. The electronic position indicators require the supply (20 to 32 VDC) to be connected to pin 1 and ground connected to pin 15.

Ways 1 and 4 are not connected for SP4T switches.

## High Performance Multiport Switches

PLATINUM Series / SPnT terminated up to 40 GHz

### DRIVING THE SWITCH

Each RF path is driven independently, and can be closed or open by applying ground to the corresponding "open" or "close" pin.

#### TYPE 4: WITHOUT TTL AND WITHOUT INDICATOR

#### Standard drive:

- Connect pin 15 to ground
- Connect pin 1 to supply (+20 VDC to +32VDC)
- Select desired RF path by applying ground to the corresponding "close" pin (Ex: ground pin 3 to close RF path 1)
- To open desired RF path connect ground to the corresponding "open" pin (Ex: ground pin 4 to open RF path 1)
- To open all RF paths, first ensure that all RF path "close" pins are disconnected from ground, then to complete the operation, connect pin 16 to ground

#### Make-Before-Break:

Make-Before-Break switching can be accomplished by closing the new RF path before opening the previously selected RF path. To complete the operation, close the new the new RF port for at least 15 minutes (minimum), then open the previously selected RF port.

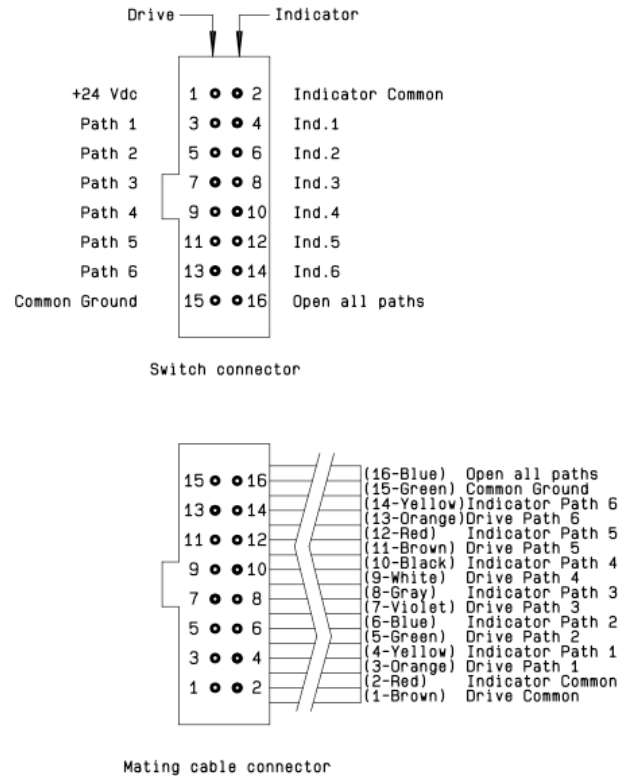

Ways 1 and 4 are not connected for SP4T switches.

## High Performance Multiport Switches

PLATINUM Series / SPnT terminated up to 40 GHz

### TYPE 7: WITH TTL (OPTION "2") / WITHOUT TTL (OPTION "1") AND INDICATORS

Each RF path can be closed by applying Ground or TTL "High" for option 2 to the corresponding "drive" pin. In general, except for Make-Before-Break drive, all other RF paths are simultaneously opened by internal logic.

#### Standard drive option "1":

- Connect pin 15 to ground
- Connect pin 1 to supply (+20 VDC to +32 VDC)
- Select (close) desired RF path by applying ground to the corresponding "drive" pin (Ex: apply ground to pin 3 to close RF path 1)
- To select another path, ensure that all unwanted RF path "drive" pins are disconnected from ground (to prevent multiple RF path engagement), then apply ground to the "drive" pin which corresponds to the desired RF path
- To open all RF paths, ensure that all RF path "drive" pins are disconnected from ground, then complete the operation by applying ground to pin 16

#### TTL drive option "2":

- Connect pin 15 to ground
- Connect pin 1 to supply (+20 VDC to +32 VDC)
- Select (close) desired RF path by applying TTL "High" to the corresponding "drive" pin (Ex: apply TTL "High" to pin 3 to close RF path 1)
- To select another path, ensure that all unwanted RF path "drive" pins are in TTL "Low" position (to prevent multiple RF path engagement), then apply TTL "High" to the "drive" pin which corresponds to the desired RF path
- To open all RF paths, ensure that all RF path "drive" pins are in TTL "Low" position, then to complete the operation by applying TTL "High" to pin 16

#### Break-Before-Make:

Open the undesired RF path after 15 minutes (minimum), then close the new RF port.

#### Make-Before-Break:

Ensure that the previously selected RF path "drive" is connected to ground (or TTL "High" for option "2"), then close the new RF path.

Ways 1 and 4 are not connected for SP4T switches.

**SPDT Low PIM up to 18 GHz**

To meet growing market demands created by the deployment of 4G/LTE networks, Radiall has introduced a new range of Low PIM switches. RAMSES SPDT Low PIM switches are perfectly suited for RF test systems and test benches requiring excellent passive intermodulation performance up to 18 GHz, with a guarantee PIM performance of -160 dBc @ +43 dBm over a life span of 2 million switching cycles.

These products are specific to instrumentation and telecommunication applications.

Example of P/N:  
R570413030LP is a SPDT Low PIM SMA 18 GHz, failsafe, 28 Vdc, with suppression diodes, solder pins.

**PART NUMBER SELECTION**

I.C.: Indicator contact - S.C.O.: Self Cut-Off

(1): Suppression diodes are already included in Self Cut-OFF & TTL option

(2): Positive common shall be specified only with type 2, 3, 5 & 6 because failsafe models can be used with both polarities

(3): Polarity is not relevant to application for switches with TTL driver

(4): Available only for N models

**SPDT Low PIM up to 18 GHz**

**GENERAL SPECIFICATIONS**

Operating mode		Failsafe		Latching	
Nominal operating voltage (across operating temperature)	Vdc	12 (10.2 to 13)	28 (24 to 30)	12 (10.2 to 13)	28 (24 to 30)
Coil resistance at 23°C (+/-10%)	Ω	47.5	275	58	350
Operating current at 23°C	mA	250	102	210	80
Average power		See Power Rating Chart on page 1-13			
TTL input	High Level	2.2 to 5.5 Volts		800µA max 5.5 Volts	
	Low Level	0 to 0.8 Volts		20µA max 5.5 Volts	
Indicator rating		1 W / 30 V / 100 mA			
Switching time	ms	10			
Life (Min)		2 million cycles			
Connectors		SMA - N			
Operating temperature range		-25°C to +70°C			
Storage temperature range		-55°C to +85°C			
Vibration (MIL STD 202, method 204D, cond.D)		10-2000 Hz, 20g		operating	
Shock (MIL STD 202, method 213B, cond.C)		100g / 6 ms, ½ sine		operating	

**RF PERFORMANCES**

Connectors	Frequency range GHz	V.S.W.R. (max)	Insertion loss (max) dB	Isolation (min) dB	Impedance Ω	Third order intermodulation
N	DC - 12.4	DC - 1	1.15	0.15	85	-160 dBc @ +43 dBm (2 carriers 20W)
		1 - 2	1.20	0.20	80	
		2 - 3	1.25	0.25	75	
		3 - 8	1.35	0.35	70	
		8 - 12.4	1.50	0.50	60	
SMA	DC - 18	DC - 3	1.10	0.15	80

LOW PIM

**DPDT Low PIM up to 18 GHz**

To meet growing market demands created by the deployment of 4G/LTE networks, Radiall has introduced a new range of Low PIM switches. RAMSES DPDT Low PIM switches are perfectly suited for RF test systems and test benches requiring excellent passive intermodulation performance up to 18 GHz, with a guarantee PIM performance of -160 dBc @ +43 dBm over a life span of 2 million switching cycles.

These products are specific to instrumentation and telecommunication applications.

Example of P/N:

R577163105LP is a DPDT Low PIM N 12.4 GHz latching with Indicators, Self Cut-Off, 28 Vdc, TTL driver, D-Sub connector.

**PART NUMBER SELECTION**

I.C.: Indicator contact - S.C.O.: Self Cut-Off

(1): Suppression diodes are already included in Self Cut-OFF & TTL option

(2): Positive common shall be specified only with type 2, 3, 5 & 6 because failsafe models can be used with both polarities

(3): Polarity is not relevant to application for switches with TTL driver

**DPDT Low PIM up to 18 GHz**

SECTION 7 TABLE OF CONTENTS

**General Information/Specifications**

**GENERAL INFORMATION/SPECIFICATIONS**

Radiall Hi-Rel switches are manufactured based on over 40 years of experience and thousands of products that have been designed, qualified, and delivered for both commercial and military applications. With a space heritage of over 25 years and products in flight on over 250 satellites around the world, Radiall guarantees the highest level of manufacturing, quality and reliability.

Radiall Hi-Rel coaxial switches have been fully evaluated and approved by the European Space Agency for Space use according to the generic specification ESCC3603. Radiall offers products tested at several levels based on the same hardware including:

- EM: Engineering Model
- QM: Qualification Model
- PFM: Proto Flight Model

Radiall also provides a full range of low cost Hi-Rel switches for space applications. These products, meet the requirements for communication satellite applications according to RAD-GEN-SWIT-001 and follow detailed specifications according to the Radiall part number list (see page 6-3).

**ENVIRONMENTAL CHARACTERISTICS**

		Qualification level
Operation temperature range		- 30°C / + 85°C
Non operation temperature range		- 40°C / + 85°C
Vibration	Sinus	5 – 100 Hz / 20g
	Random	20 – 2000 Hz / 28.57 grms
Schocks		½ sinus / 1200g / 0.25 ms
Pressure		Free space vacuum

## Radial Specifications

### RADIALL BEST RUNNERS PART LIST (FM P/N):

## Low Power Coaxial T Switch

LOW-POWER LATCHING COAXIAL T SWITCH according to Radiall specification  
RAD-DET-TSSD-002 and RAD-DET-TSRD-003

- Random or Sequential drive
- DC to 22 GHz with SMA connectors
- Up to 31 GHz with SMA 2.9 connectors
- Telemetry circuit
- Suppression diodes
- D-Sub or solder pins
- Stand up or Lay Down or fixing plate
- 58 grams and up

### GENERAL SPECIFICATIONS

	Unit	RAD-DET-TSSD-002 Sequential Drive			RAD-DET-TSRD-003 Random Drive		
		Min	Typical	Max	Min	Typical	Max
Actuation Voltage	V	+22	+26	+29	+22	+26	+29
Pick-Up Voltage	V			+20.5			+20.5

## Thermal Vacuum Switches for Ground Segments

With more than 25 years of experience in the space industry, Radiall has developed a product offering that emphasizes reliability and performance. The latest addition to the range includes SPDT, DPDT and SPnT RF switches designed to operate in thermal vacuum environments. These products can be mounted on ground based test benches, used in test equipment, and space vacuum conditions.

Tvac Series switches are designed in accordance with our standard RAMSES product offering and offer identical configurations with excellent performance.

### PART NUMBER SELECTION

6 standard models are available for test benches dedicated to space equipment in Thermal Vacuum environment:

- 22 GHz SPDT coaxial switch: R571 F63 121
- 22 GHz DPDT coaxial switch: R578 F63 121
- 22 GHz non terminated SP6T coaxial switch: R583 F33 121
- 40 GHz SPDT coaxial switch: R571 863 121
- 40 GHz DPDT coaxial switch: R578 863 121
- 40 GHz non terminated SP6T coaxial switch: R583 833 121

Operating mode	Latching	
Nominal operating voltage (across operating temperature)	Vdc	28 (24/30)
Coil resistance (+/-10%)	Ω	DPDT and SP6T: 225 / SPDT: 350
Nominal operating current at 23°	mA	DPDT and SP6T: 125 / SPDT: 80
Average power (Thermal vacuum condition)	See Power rating chart on page 7-20	
Switching time (max)	SPDT and DPDT: 10ms / SP6T: 15ms	
SMA - SMA 2.9	SPDT	10 million cycles
SMA - SMA 2.9	DPDT	2.5 million cycles
SMA - SMA 2.9	SP6T	5 million cycles / 2 million cycles
Connectors (1)	SMA / SMA2.9	

(1) connector SMA 2.9 is equivalent to "K connector®", registered trademark of Anritsu.

## Thermal Vacuum Switches

### ADDITIONAL SPECIFICATION

Polarity		Positive Common
Actuator terminals	SPDT	Solder Pins
	DPDT	Male 9 pins D-Sub connector
	SP6T	Male 25 pins D-Sub connector
Operating temperature range		-40°C to 85°C
Storage temperature range		-55°C to 85°C
Construction		Thermal Vacuum compatible

### SMA CONNECTOR

Switch model	Frequency range GHz	V.S.W.R. (max)	Insertion loss (max) dB	Isolation (min) dB	Impedance $\Omega$	Average power(1) W	Repeatability
SPDT	DC - 22	DC - 3	1.20	0.20	80	50	240
		3 - 8	1.30	0.30	70		150
		8 - 12.4	1.40	0.40	60		120
		12.4 - 18	1.50	0.50	60		100
		18 - 22	1.70	0.70	55		40
DPDT SP6T (non terminated)	DC - 22	DC - 3	1.20	0.20	80	50	240
		3 - 8	1.30	0.30	70		150
		8 - 12.4	1.40	0.40	60		120
		12.4 - 18	1.50	0.50	60		100
		18 - 22	1.70	0.70	50		40

### SMA2.9 CONNECTOR

Switch model	Frequency range GHz	V.S.W.R. (max)	Insertion loss (max) dB	Isolation (min) dB	Impedance $\Omega$	Average power (1) W	Repeatability
SPDT DPDT	DC - 40	DC - 6	1.30	0.30	70	50	80
		6 - 12.4	1.40	0.40	60		60
		12.4 - 18	1.50	0.50	60		50
		18 - 26.5	1.70	0.70	55		20
		26.5 - 40	1.90	0.90	50		10
SP6T (non terminated)	DC - 40	DC - 6	1.30	0.30	70	50	40
		6 - 12.4	1.40	0.40	60		30
		12.4 - 18	1.50	0.50	60		25
		18 - 26.5	1.70	0.70	55		15
		26.5 - 40	1.90	0.90	50		5

(1): Average power at 25°C per RF path / Sea level.

### WHY A THERMAL VACUUM TEST BENCH ?

- It limits the need of hermetic adaptors and cable assemblies
- It improves RF performance
- It decreases the complexity of the Test bench

## Thermal Vacuum Switches

### POWER DERATING GRAPH

#### SMA22 GHz

SPDT, DPDT and SP6T products

## RF & Microwave Products

### GENERAL INFORMATION

Specialized in passive RF & Microwave components, Radiall's engineering staff develops and manufactures a wide range of other coaxial standard devices including terminations, attenuators, coaxial couplers, detectors, rotary joints, filters, and phase shifters. This range covers a wide frequency spectrum from DC to 50 GHz for telecom, aerospace, instrumentation and military application.

Radiall introduced TestPro cables assemblies into the market for test and measurement applications, in order to meet customers needs.

For Space applications, Radiall also offers a full range of space components built according to ESA specifications including attenuators, terminations, couplers, connectors, coaxial cable assemblies (flexible or semi-rigid cables) for L, S, C, X, Ku and Ka band applications.

### TERMINATIONS

Radiall's range of terminations is intended to terminate a coaxial transmission through characteristic impedance and dissipating the RF incident power. The main features of our full range of terminations include:

- Power range from 0.5W to 1000W
- Frequency from DC up to 50 GHz
- 50Ω Impedance
- High repeatability
- Compatibility with Broad type connections: BMA, BNC, QMA, QN, N, SMA, SMA2.9, SMB, SMP, SSMA, TNC, 1.0/2.3, 7/16, 2.4mm
- Connector interface according to applicable MIL, DIN, NF and CEI
- Dedicated range for test & measurement with the lowest VSWR

### ATTENUATORS

Attenuators are linear passive transition line components designed to be inserted between two coaxial lines to reduce the input power in a matched system by a predetermined ratio. This ratio is expressed in logarithmic terms. 3dB as a power ratio is 2, 6dB is 4, 20dB is 100, and 30dB is 1000. The main features of our full range of coaxial attenuators include:

- Power range from 1W to 100W
- Frequency from DC up to 40 GHz
- High repeatability
- 50Ω Impedance
- Compatibility with Broad type connections : BNC, QN, N, SMA, SMA 2.9, SMB, TNC, 7/16
- Connector interface according to applicable MIL, DIN, NF and CEI
- Dedicated range for test & measurement with the lowest VSWR

## RF & Microwave Products

### COAXIAL COUPLERS

Radiall's coaxial couplers offer a reliable design to meet the needs of microwave applications. The main features of our full range of coaxial couplers include:

- Directional & 3dB Hybrid 90° couplers
- Power range from 50 to 500 Watts
- Frequency from 0.15 GHz to 8 GHz
- 6, 10, 20 & 30 dB coupling factors
- SMA, Type N offered, TNC 7/16
- Dedicated range providing flat frequency response
- Possibility to design custom coaxial couplers as per customer requirements

### SPECIAL MICROWAVE COMPONENTS

Radiall offers a complete range of special Microwave components suitable for applications utilizing the following devices:

- Feedthrough terminations
- Detectors
- Rotary joints
- DC Blocks
- Monitor tees
- Signal samplers
- Phase shifters
- Filters

#### Feed through terminations

These components are used to properly terminate a transmission line while testing with a high impedance measuring system such as an oscilloscope input.

#### Detectors

A detector is a 2 port device capable of supplying a low frequency signal on its output port (video), of a level proportional to the RF power applied to its input port.

#### Rotary joints

These components provide the transition between 2 coaxial transmission lines that rotate while maintaining necessary RF characteristics.

#### DC blocks

DC blocks are composed of a capacitor inserted to the central conductor of the coaxial line. They block any DC or low frequency current present in the line.

#### Signal samplers

These devices are used to sample part of an RF signal from a coaxial line. They are not directive, and the sample incident reflects energy.

#### Phase shifters

These components create a mechanical adjustable phase shift by variation in the physical length of the transmission line.

## TestPro Cable Assemblies

TestPro cables are dedicated to bench test cable assemblies. Our TestPro range differs from the SHF range, because the cables and connectors are designed for high performance and testing and measurement.

While others propose cosmetic solutions to appear more robust without any real performance advantages, Radiall's design offers a full range of test bench cables that performs better than any other product on the market.

Test cable assemblies are intended for daily use in component and assembly shops, test labs and automatic test equipment applications. They differ from standard cable assemblies in that they are specifically designed for applications that require repeated connect/disconnect procedures, strenuous flexing situations and applications where cable and connector durability is important.

Key characteristics of the Testpro range include:

- Rugged interface: 5,000 mating/unmating lifecycle
- Flex life: over 20,000 cycles
- High flexibility
- Outstanding phase and loss stability for long calibration intervals

	TestPro 4.2	TestPro 3	TestPo 2 (launch 2014)
Frequency	DC - 18 GHz	DC - 26.5 GHz / DC- 40 GHz	DC - 50 GHz / DC - 67 GHz
Impedance	50 Ω ± 2 Ω	50 Ω ± 1 Ω	50 Ω ± 1 Ω
IL (dB/m)	2.10 @ 18 GHz	2.41 @ 26.5 GHz - 3.11 @ 40 GHz	5.00 @ 50 GHz - 5.92 @ 67 GHz
Test IL (dB/ft)	0.64 @ 18 GHz	0.73 @ 26.5 GHz - 0.94 @ 40 GHz	1.52 @ 50 GHz - 1.80 @ 67 GHz
Phase with flexure stability	2° @ 18 GHz	2° @ 26.5 GHz - 5° @ 40 GHz	6° @ 50 GHz - 8° @ 67 GHz
Amplitude stability (dB)	0.05 @ 18 GHz	0.05 @ 40 GHz	0.05 @ 50 GHz
Shielding Effectiveness	-110 dB min @ 1 GHz	-100 dB min @ 1 GHz	-100 dB min @ 1 GHz
Crush resistance	135 lb/linear in.	260 lb/linear in.	260 lb/linear in.
Minimum bend radius	25 mm (1 in.)	25 mm (1 in.)	25 mm (1 in.)
Temperature (°C)	-55 / + 125 °C	-55 / + 125 °C	-55 / + 125 °C
Connectors	SMA, N, TNC, PC7	SMA 3.5, SMA 2.9, NMD 2.9, TVAC 2.9, SMA 2.4mm, N	2.4mm / 1.85 mm
Flexure life cycle	10,000	20,000	20,000
Mating cycles durability	5,000	5,000	5,000
Armor	Available	Integrated	Integrated
RoHS/REACH	Yes	Yes	Yes

\*Please refer to Testpro catalog D1A295TE

## Space Qualified Products

### COAXIAL CONNECTORS

Full range of coaxial connectors operating up to Ka band.

- SMA and SMA 2.9 interfaces ESCC QPL:

Qualified according to ESCC 3402 specifications by European Space Agency (ESA)

- TNC and SMP interfaces classified EPPL: ESA Preferred Part List

Radiall has expended the SMP range to include, SMP-LOCK connectors featuring a robust locking mechanism. Qualified for space applications, this new interface is the best solution when size, weight, security, and high RF performance are required.

This new interface is compatible with most of Radiall products below.

### LOW LOSSES CABLE ASSEMBLIES

Space qualified low loss flexible coaxial cable assemblies up to 40 GHz

- Available connectors: SMA, SMA 2.9, TNC or SMP

### SEMI-RIGID CABLE ASSEMBLIES

Space qualified semi-rigid coaxial cable assemblies up to 40 GHz

- Available connectors: SMA, SMA 2.9, TNC or SMP

### COUPLERS AND POWER DIVIDERS

Space qualified passive couplers DC-22 GHz and power dividers DC-31 GHz

- Admissible power up to 200 WCW

- Available connectors: SMA, SMA 2.9 and TNC

## Space Qualified Products

### COAXIAL SWITCHES

A full range of light weight Space qualified switches operating up to the Ka band.

- SPDT, DPDT, DP3T and T switch configurations available
- Available connectors: SMA, SMA 2.9 and TNC

### TERMINATIONS

Range of low power coaxial loads up to 40 GHz and ESA qualified (European Space Agency).

- Available connectors: SMA, SMA 2.9, SMP and TNC interface

### ATTENUATORS

Range of low power coaxial attenuators DC - 40 GHz qualified by European Space Agency (ESA).

- Available connectors: SMA, SMA 2.9 interface
- Attenuation 0 to 30 dB

### PHASE SHIFTERS

These components create a mechanical adjustable phase shift by variation in the physical length of the transmission line up to 22 GHz.

## Switches Application

### COAXIAL TRANSFER SWITCHES (DPDT)

A DPDT is Double Pole Double Throw switch that provides two independent pairs of RF paths that are actuated simultaneously. The transfer switch is a modified DPDT device, where as a true DPDT switch is a six port device that contains completely independent transmission paths.

In a transfer switch, two transmission paths are not completely independent as shown below:

DPDT

TRANSFER

Examples of transfer switch applications:

R577 Ramses, R593 Platinum or R513 Titanium series can be selected for this application

Redundancy of two transmitters:

Active transmitters are connected directly to the antenna. A second transmitter is terminated to a medium power termination, and put in stand by position, ready to switch to the antenna in case of a failure of the active transmitter. This is done to create redundancy for antenna maintenance.

Two transmitters to two antennas:

For better signal diversity, 2 antennas are alternately connected to either of the two transmitters.

## Switches Application

Coaxial Transfer as a bypass switch for circuit insertion applications:

A full RF or microwave passive circuit or circuit element as a filter can be inserted into a coaxial transmission line by using a transfer switch. This element is shortened by a transfer blade in through position.

Other RF arrangements for a bypass function:

- Two SPDT switches configured to operate as a bypass switch
- R570 RAMSES, R596 (Surface Mount Technology) or R595 PLATINUM series can be used to achieve a bypass function

A more basic option, SPDT (Single Pole Double Throw) can be used to perform a bypass switch function. The advantage of using 2 SPDT relays instead of a transfer switch is a possible reduction in total package size. Generally, the use of 2 SPDT creates a higher isolation than a transfer switch.

A DP3T switch configured to operate as a transfer switch:

A R585 Ramses or R595 Platinum series can be selected to insert a passive or active component or circuit in a RF or microwave line.

An active component as an amplifier can be inserted in a microwave line; this amplifier is connected to a 50 Ohm termination (as a booster in stand-by status) when not inserted in the main coaxial line.
